

PITCH DECK | VISA STRATEGY ASSOCIATE CROSS BORDER STRATEGY AND OPERATIONS

Cross Border needs a market view for every region and every persona. I have already built that exact model, twice, in two different industries.

Market sizing, competitive intelligence and business-case development, translated from semiconductors and industrial tech into a five-region global growth pillar.

170 to 28 facilities sized into a SAM, 4 global verticals, Safran

10+ competitors benchmarked across EMEA and the US, Sensata

+12% YoY revenue, +8% share from competitive-led repricing

\$627M target, 1,200 opportunities, 3 regions ranked in one dashboard

Claude AI agents automate recurring market analysis, Applied Materials

Cross Border is not one strategy problem. It is **one problem repeated across five regions, each with its own persona.**

What a five-region growth pillar runs into

A student traveler in Tokyo and an expat in Madrid do not respond to the same value proposition, the same offer structure or the same issuer partnership. Every corridor and every destination effectively needs its own market case.

Building out new destinations (Madrid, Tokyo, Egypt) while strengthening the ones that already work (Paris, New York) means the strategy team has to run market prioritization and persona work continuously, not once.

The fix is not one great analysis. It is a repeatable way to size a market, benchmark the competitive set, and turn both into a business case a regional team can act on fast.

What I have already run, in two other industries

At **Safran**, I led a 5-consultant team that sized 170 facilities down to a SAM of 28 and built personas across 4 verticals, each with its own positioning, before presenting the market-entry case to leadership.

At **Sensata**, I benchmarked **10+ competitors** across EMEA and the US and turned that read into pricing and go-to-market decisions that drove +12% YoY revenue and +8% market share.

I am now running the same discipline at **Applied Materials**, turning fragmented Sales, Engineering and Accounts input into one market view, with recurring analysis automated through Claude AI agents.

A Strategy Associate who leverages market, competitive and internal data to build hypotheses across travel corridors, issuers and personas is describing this exact loop: size the market, benchmark the field, build the case, repeat it for the next corridor.

What the Cross Border Strategy Associate opening asks for, and where the proof sits.

What the role covers

"Leverage market, competitive and internal data to develop hypotheses and analyses to inform key strategic decisions."

"Help define our global strategy for travel personas (expats, students, etc.)."

"Support investment prioritization and management across regions" and issuer value creation.

My Proof

Safran TAM/SAM/SOM engagement: 170 facilities sized to a SAM of 28, personas across 4 verticals, market-entry business case presented directly to leadership.

Sensata competitive benchmarking: 10+ competitors across EMEA and the US, translated into repricing decisions that drove +12% YoY revenue and +8% market share.

Sensata Bleeders and Leakers dashboard: ranked 1,200 opportunities against a \$627M target across 3 regions, the same regional-prioritization muscle Cross Border needs across 5.

Applied Materials today: partner across Sales, Engineering and Accounts to turn scattered internal data into one market view for investment decisions.

Persona-by-persona, market-by-market: the same structure Cross Border needs by corridor.

Led a 5-consultant team through a full TAM/SAM/SOM exercise for Safran: 170 facilities analyzed down to a SAM of 28, with distinct personas and positioning built across 4 verticals before the case went in front of Safran's leadership.

170 to 28

Facilities Sized to a SAM

The market-sizing discipline behind every regional or corridor-level business case: start broad, narrow to what is actually addressable.

4 Verticals

Personas and Positioning Built

Aerospace, defense, healthcare and scientific research each got their own go-to-market approach, not one generic pitch.

10+

Competitors Analyzed

Assessed pricing strategy and the financial feasibility of market entry before recommending where to compete first.

The same pattern repeated at Sensata: benchmark the competitive set, rank the opportunity, then build the case that gets leadership to act. That is the loop Visa Destinations needs run market by market, from Paris and New York to Madrid, Tokyo and Egypt.

What the first month supporting Cross Border strategy and Visa Destinations looks like.

WEEK 1 Map the existing corridors Pull the market, competitive and internal data already behind the live destinations (Paris, New York). Sit with the regional and global Cross Border teams to hear which analyses actually moved an investment decision. Why first: the strongest pattern for a new destination is usually visible in what already worked for an existing one, the same move that opened the Safran engagement.	WEEK 2-3 Build the persona and sizing model Turn the strongest patterns into a repeatable hypothesis-and-analysis framework for travel personas (expats, students) and a new destination market, then pressure-test it against a real corridor with the regional team. Why now: building the model against a real corridor, not in a vacuum, is what made the Safran case defensible in front of leadership.	WEEK 4 Support the investment case Package the analysis into an investment-prioritization case for a new destination (Madrid, Tokyo or Egypt), with issuer and market-share implications a global stakeholder can act on quickly. Why this fast: a strategy analysis only earns its keep once it drives an actual prioritization call.
--	---	---

CLOSE

You are hiring someone to build the market view behind the next five destinations, not just analyze the ones that already exist. I have already run this exact discipline, twice, in two other global industries.

The core proof is Safran and Sensata together: a **TAM/SAM/SOM model sized from 170 facilities to a SAM of 28** across 4 global verticals, and **10+ competitors benchmarked** into pricing decisions that drove +12% YoY revenue and +8% market share, both built to survive a leadership review.

What carries over directly is the habit itself: turn market, competitive and internal data into a hypothesis, then into a business case a regional team can act on. **I am running that same loop right now at Applied Materials**, across Sales, Engineering and Accounts, which means the cross-functional muscle Cross Border needs is not something I would need to build from scratch.
