Hiring Team, OpenAI

Your posting asks for someone who can turn a discounting and concessions review into pricing guidance people actually use. That is the exact program I ran at Sensata: the Bleeders and Leakers initiative took a messy discount and concession dataset and turned it into guidance Sales acted on directly, recovering $700K+ in margin in two quarters and raising distributor margins from 53% to 61% in the same stretch.

I later built a second version of that discipline into a product. PriceKeel is a guardrail engine that reads a live discount exception and recommends an explainable limit learned from a company's own closed-won and closed-lost deals, with an audit trail Finance can check line by line, the same scalable framework your posting describes translating segment goals into. Before founding it, I partnered directly with senior Sensata executives on AP26 revenue models and multimillion-dollar customer quotes, the kind of strategic enterprise deal work where a commercial proposal has to hold up against real deal economics, not just a list price.

Pricing rarely lives inside one function, and I have run it from Finance, GTM and Product at once: carrying P&L targets as Strategic Marketing III at Applied Materials while building the value-based pricing and forecasting models Sales and Engineering both have to trust, and before that leading a five-person team through a pricing and market-entry study for Safran across four verticals. Both came down to the same habit your posting is asking for: find the root cause in an ambiguous pricing question, reconcile the differing perspectives in the room, and turn the answer into a framework someone else can run without me in it.

I would welcome fifteen minutes to talk through how that maps onto your credit program and segment pricing work. Education, startups and government all reward the same thing: a framework built once that scales cleanly to the next segment. Proof trail at adhi-pricing-ai.vercel.app/ref/openai.
