PITCH DECK | OPENAI PRICING STRATEGIST, GTM

Pricing-performance reviews are only as good as the discounting data feeding them. The real lever here is a guardrail that turns every concession into guidance, not just a report.

Built from a program that recovered $700K+ in margin in two quarters at Sensata, a guardrail engine now governing B2B SaaS deal pricing at PriceKeel, and enterprise deal economics shaped directly alongside senior executives.

- **$700K+ Recovered** - Sensata Bleeders & Leakers, discounting and concession-gap analysis turned into pricing guidance
- **53% to 61% Margin** - distributor and channel-partner repricing in under two quarters
- **Guardrail Engine** - PriceKeel's discount-exception engine with a Finance-auditable trail
- **AP26 & Customer Quotes** - multimillion-dollar enterprise deal economics shaped with senior executives
- **Claude AI Agents** - automating recurring pricing analysis today

WHY THIS DECK EXISTS

Pricing-performance reviews, discounting analysis and credit-program ROI all come down to one discipline: turning a messy deal-economics signal into guidance someone downstream can run. That is a governance habit, not a reporting one.

What that actually requires

Building a regular review that separates real discount necessity from margin erosion, at a scale where one bad exception costs real money.

Setting objectives and ROI measures for credit programs and promotions before the money moves, not after the renewal.

Translating segment goals (education, startups, government) into one scalable commercial framework instead of a new deal-desk exception for each.

What I have already built at that layer

Recovered **$700K+ in margin in two quarters** at Sensata by turning discounting and concession-gap analysis into guidance the sales org acted on directly.

Built **PriceKeel's guardrail engine**: an explainable discount limit learned from each company's own closed-won and closed-lost deals, with a Finance-auditable trail.

Shaped **AP26 revenue models and multimillion-dollar customer quotes** directly with senior executives, the strategic-deal discipline this role scales to new segments.

> **The through-line: discount governance and segment-pricing frameworks are not a gap to grow into here. They are the loop I already run.**

THE MANDATE, MAPPED

What the role covers, and where the proof already sits.

What the role covers

> *Build regular pricing-performance reviews, analyze discounting and concessions, turn findings into better pricing guidance.*

> *Define objectives and success measures for credit programs and promotions, and evaluate ROI.*

> *Partner on strategic enterprise deals to align commercial proposals with sound deal economics.*

My proof

Sensata Bleeders & Leakers: $700K+ margin recovered in 2 quarters via discounting and concession-gap analysis.

PriceKeel guardrail engine: explainable discount limits with a Finance-auditable trail.

Sensata AP26 and customer quotes: multimillion-dollar enterprise deal economics shaped with executives.

THE CLOSED-LOOP PROOF, IN DEPTH

PriceKeel: a discount guardrail built from the exception up, not handed a finished policy.

Built as a decision-integrity layer that reads a live discount exception inside the deal platform, the same build-govern-measure loop a scalable enterprise pricing framework runs on.

Guardrail Engine

Learned From Closed-Won/Lost Deals

Reads every live discount exception and recommends an explainable limit, not a static discount table.

Finance Audit Trail

Evidence-Backed Exception Review

Records the human pricing decision with evidence Finance can check line by line, replacing legacy CPQ reporting.

$700K+ Recovered

Sensata Bleeders & Leakers, 2 Quarters

The discounting and concession-gap analysis the guardrail engine automates was built and run by hand first.

The same discipline carries into Applied Materials, where I build competitive, value-based pricing and forecasting models and automate the recurring analysis with Claude AI agents today.

FIRST 30 DAYS

What the first month inside OpenAI's GTM pricing function would look like.

WEEK 1

Pull the discounting and concessions data apart

Separate real discount necessity from margin erosion across the current book, the same first step that found $700K in Sensata's Bleeders & Leakers program.

Why first: a pricing-guidance review built before the data is clean is a guess.

WEEK 2-3

Set ROI measures for credit programs and promotions

Define the objectives and success measures each program has to clear before its next renewal cycle, the same discipline that turned Sensata's AP26 revenue models into executive-ready numbers.

Why now: a credit program without an ROI bar gets renewed on inertia, not evidence.

WEEK 4

Turn the segment plan into one scalable framework

Translate education, startup and government goals into a single commercial structure instead of three separate deal-desk exceptions, the same framework discipline behind PriceKeel's guardrail engine.

Why this fast: a framework built once scales to the next segment without a rebuild.

CLOSE

Enterprise pricing here needs someone who has already turned discounting data into guidance and governed the exception, not just reported on it. I have.

The core proof is Sensata: the Bleeders & Leakers program recovered **$700K+ in margin in two quarters** and raised distributor margins from **53% to 61%**, built from the same discounting and concession-gap analysis this role's pricing-performance reviews are scoped around.

What is harder to find is someone who has also governed the exception directly: PriceKeel's guardrail engine and Finance-auditable trail, and AP26 revenue models and multimillion-dollar customer quotes shaped alongside senior executives. I bring the same discipline to GTM pricing here, and I keep building with AI tools today, automating recurring analysis with **Claude agents** at Applied Materials.
