PITCH DECK | IVO PRODUCT MARKETING MANAGER

# Ivo's win-loss process and competitive view need to scale as fast as the product does, and that pattern-matching discipline, turning closed deals into a decision engine Sales trusts, is work I already run, just pointed at pricing instead of contracts.

*Built and measured before: a 30% win-rate lift from battlecards and enablement built for 50+ reps, a price-realignment call that moved revenue and share by reading 10+ rival players, and a founder-built engine that already turns closed-won and closed-lost deals into a guardrail.*

- **+30% Win Rate** - Sensata battlecards and enablement for 50+ reps
- **+12%/+8%** - price realignment from benchmarking 10+ rival players
- **$2M+ GTM** - Sensata sensing-product launch owned end to end
- **30+ Interviews** - OEM/distributor feedback fed straight into the roadmap
- **PriceKeel** - founder-built closed-won/closed-lost decision engine

WHY THIS DECK EXISTS

# Scaling a win-loss process and keeping a competitive view current while the product expands from legal into procurement is a synthesis problem, not a slide-deck problem.

### What the mandate actually requires

A win-loss process scaled past one person's memory, where findings turn into plans GTM, Product and Enablement can all act on.

A competitive view that stays current while the market changes every week, with battlecards and objection handling reps actually trust mid-call.

A proactive partner who builds a new process without waiting for a mature playbook, because Ivo does not have one yet for this.

### What I have already built at that layer

Built the **competitive benchmarking** across 10+ rival players behind a price-realignment call, driving +12% YoY revenue and +8% market share.

Built the **battlecards, decks and case studies** 50+ reps used against entrenched competitors, lifting win rates 30%.

Founded **PriceKeel**, a decision engine that reads closed-won and closed-lost deals and recommends a guardrail, with no playbook to copy from.

> **The through-line: a win-loss and competitive-intelligence program is a pattern-matching discipline I have already run twice, once on a live revenue line at Sensata and once as the whole product at PriceKeel.**

THE MANDATE, MAPPED

# What the role covers, and where the proof already sits.

## What the role covers

> *Scale Ivo's win-loss process, synthesize what we learn from customers and deals, and turn those findings into plans GTM, Product, Enablement and other Marketing teams can act on.*

> *Keep Ivo's competitive view current by tracking the market and maintaining practical battlecards, comparison guidance, and objection handling for the GTM team.*

> *Be a close partner to the GTM team, giving reps and CSMs the context, messaging, materials, and talk tracks they need to sell new products and features.*

## My proof

**Sensata pricing:** competitive benchmarking across 10+ rival players turned into a price-realignment call Sales could execute on, not just read about.

**Sensata interviews:** 30+ OEM and distributor conversations fed directly into roadmap decisions, raising CSAT 22%, the find-synthesize-act loop a win-loss process runs on.

**Sensata enablement:** decks, case studies and talk tracks for 50+ reps that lifted win rates 30% on a live launch.

THE CLOSED-LOOP PROOF, IN DEPTH

# PriceKeel: a decision engine built on the same closed-won/closed-lost pattern a win-loss process runs on.

Founded and built as a decision-integrity layer for B2B SaaS deal pricing: it reads a live discount exception inside the deal platform and recommends an explainable guardrail learned from a company's own closed-won and closed-lost deals, the audit trail Finance can act on instead of arguing about.

## Founder & CEO

**Built the Decision Engine Zero to One**

Designed the guardrail logic, set up the CRM, CPQ and deal-approval flow, and ran it with no existing playbook.

## Closed-Won / Closed-Lost

**The Same Pattern a Win-Loss Process Needs**

Turns a company's own deal history into a guardrail Sales and Finance both trust, the exact synthesis a scaled win-loss program depends on.

## Pilots + Raise

**Running Pilots, Raising the First Round**

Selling against legacy CPQ and deal-desk tooling, the same "do what it takes" posture the Ivo posting asks for.

The same discipline carries over from Sensata, where I drove +12% YoY revenue and +8% market share off competitive benchmarking, and from Applied Materials, where I automate the repetitive side of market and competitive analysis with Claude AI agents today.

FIRST 30 DAYS

# What the first month on Ivo's win-loss and competitive program would look like.

WEEK 1

### Map today's win-loss and battlecard state

Sit with Sales, CSMs and Product to find where the current competitive view is stale or missing, the same audit-first habit PriceKeel's guardrail engine runs on before recommending anything.

**Why first:** a battlecard rebuilt before anyone asks what is actually missing is a guess, not a fix.

WEEK 2-3

### Scale the synthesis, not just the content

Stand up a repeatable win-loss intake from deals and customer calls, the same 10+-player benchmarking discipline behind the Sensata price-realignment call, so findings reach GTM, Product and Enablement as a plan, not a memory.

**Why now:** one person's memory of why a deal was lost does not survive a 6x year of growth.

WEEK 4

### Ship the first refreshed battlecard and persona brief

Hand GTM one current competitive battlecard plus a procurement-buyer messaging brief, the same decks-and-talk-tracks handoff that lifted Sensata's win rates 30%.

**Why this fast:** a positioning brief only Marketing believes in does not move a rep's close rate.

CLOSE

# Ivo needs a win-loss and competitive-intelligence program that scales past one person's memory, built by someone who has already run that pattern-matching discipline twice. I have.

The core proof is Sensata: competitive benchmarking across 10+ rival players that drove a price-realignment call (+12% YoY revenue, +8% market share), battlecards and enablement that lifted win rates **30%** for 50+ reps, and 30+ customer interviews that moved a roadmap, not just a deck.

What is harder to find is someone who has also built the pattern-matching engine itself: PriceKeel reads a company's own closed-won and closed-lost deals and recommends a guardrail, the same discipline a scaled win-loss process needs, just pointed at pricing instead of contracts. I bring that same loop to Ivo's win-loss and competitive program, and I keep building with AI tools today, automating repetitive analysis with **Claude agents** at Applied Materials.
