Hiring Team, Bluebeam

Your posting asks for someone who can turn customer research and willingness-to-pay data into a defensible pricing and packaging recommendation, then build the models that project its revenue and behavioral effects before anyone signs off. That is the exact loop I ran at Sensata: the Bleeders and Leakers program ranked 1,200 pricing opportunities against a \$627M target, and following what it surfaced I recovered \$700K+ in margin in two quarters while raising distributor margins from 53% to 61%.

That recovery only held up because I validated it the way your team describes: against historical data, with a dashboard that tracked win rate, average deal size and stage distribution across 3 regions, 4 product families and 20 product lines, not a single pricing test run once and left alone. I partnered with senior executives on AP26 revenue models and multimillion-dollar customer quotes, so leading cross-functional discussions on a pricing recommendation and building alignment around it is not a new skill I would be picking up on your Build and Construct Division's timeline.

I bring the same discipline to my own company right now. At PriceKeel I built a guardrail engine that scores discount exceptions against logic learned from a company's own closed-won and closed-lost deals, plus the audit trail that gives Finance evidence for every call, the durable process a pricing function needs instead of solving each question as a one-off. On the packaging side, I modeled three subscription tiers for an earlier product from competitor benchmarks and willingness-to-pay signals, mapping feature bundles to what customers actually valued rather than guessing at the split.

What I would bring to Bluebeam's Pricing and Packaging Manager seat is someone who has already closed a quantified margin gap inside a large, multi-product business and who treats a pricing decision as something to validate, not assert. Proof trail at adhi-pricing-ai.vercel.app/ref/bluebeam.
