Hiring Team, Google

The posting for Global Strategy and Operations Manager, Global Marketing asks for someone who can set the annual plan with leadership, work across Marketing, Product, Finance and Engineering, and turn performance data into a recommendation that adjusts the approach. That is the loop I already run at Applied Materials: I pull input from Sales, Engineering and Accounts into one strategic view, then run the leadership decks, OKRs and weekly and quarterly business reviews that keep that view funding the right priorities for the year, not just the quarter in front of it.

At Sensata, I built the FY2026 Bleeders and Leakers Power BI system, evaluating 1,200 pricing opportunities across 3 regions and 20 product lines so leadership could act on \$433M in margin gaps instead of guessing where to invest. I carried that same discipline directly into AP26 revenue models and site-transition strategy with senior executives, the kind of executive-level deliverable this role is built around, and benchmarked 10+ competitors to turn a market read into a recommendation that drove +12% YoY revenue and +8% market share.

My opinion on operational efficiency work is that it only holds up once it survives contact with the teams executing it, which is why I write my own SQL and Python against the underlying numbers instead of handing someone else's chart to a room and hoping it sticks. I automate the recurring parts of that analysis with AI agents built on Claude at Applied Materials today, and I carried P&L and revenue targets for an 8-client, \$15K-\$90K/month advertising portfolio at Pixis, so I have sat on the marketing-investment side of this kind of plan as well as the strategy side that builds it. I want to bring that same bias toward a defensible model and a working cadence to Global Marketing's annual plan.
