

PITCH DECK | GOOGLE GLOBAL STRATEGY AND OPERATIONS MANAGER, GLOBAL MARKETING

Global Marketing's annual plan needs one person who turns Marketing, Product, Finance and Engineering input into a single funded plan, then keeps proving it with data all year. I already run that loop end to end.

Annual planning, executive-level deliverables and operational efficiency from someone who builds the model, presents to leadership and runs the cadence that keeps the plan honest after the kickoff meeting.

\$433M in margin gaps surfaced for leadership via a 1,200-opportunity Power BI system

+8% market share from a competitive benchmarking read turned into a funded recommendation

AP26 revenue models and site-transition strategy built directly with senior executives

\$100K/month budgets planned and defended to a leadership team for annual approval

Claude AI agents automating recurring strategy analysis at Applied Materials

An annual plan is really two disciplines held by one seat: the analysis that sets the investment, and the cadence that keeps it honest all year.

What an annual plan runs into without that seat

Marketing, Product, Finance and Engineering each hold a piece of the same plan. Without one owner connecting them, the plan gets agreed in a kickoff room and then drifts, because no one function alone can keep four stakeholders aligned to it quarter over quarter.

Performance data piles up, but turning it into a recommendation that actually changes the approach, not just a retrospective slide, takes someone who can hold the quantitative case and the executive relationship at once.

The fix is one person who treats investment analysis, cross-functional alignment and executive communication as a single discipline instead of three separate jobs.

What I already run

At **Applied Materials**, I align Sales, Engineering and Accounts into one strategic view, then run the OKRs and quarterly reviews that keep that view funding the right priorities all year.

At **Sensata**, I built the Bleeders and Leakers system that made 1,200 opportunities actionable, then carried that analysis directly into AP26 revenue models with senior executives.

Both mean I have built the model and sat in the room where it gets funded, not just one side of that work.

Partnering with leadership to set the annual plan, working across Marketing, Product, Finance and Engineering, and turning performance data into a recommendation that adjusts the approach describes this exact loop: build the case, align the stakeholders, keep proving it with data.

What the Global Strategy and Operations Manager opening asks for, and where the proof already sits.

What the role covers

- Partner with leadership to set Marketing's annual plan globally, articulating priorities and investment.*
- Work across Google products to develop solutions to the organization's issues and initiatives.*
- Improve Marketing efficiency and effectiveness through operational process.*
- Evaluate performance and make data-driven recommendations to adjust the approach; develop executive-level deliverables.*

My Proof

- Annual planning, priorities and investment:** aligned Sales, Engineering and Accounts into one strategic view at Applied Materials, and planned \$100K/month budgets at Plug Power that leadership approved each cycle.
- Cross-functional solutions:** built forecasting and market-sizing models across multiple product groups, the same cross-team modeling a global marketing plan spans.
- Operational efficiency:** built the FY2026 Bleeders and Leakers Power BI system at Sensata, turning 1,200 scattered opportunities into one process leadership could act on.
- Data-driven recommendations, executive deliverables:** shaped AP26 revenue models and site-transition strategy directly with senior executives; turned competitive benchmarking into a recommendation that lifted market share +8%.

Bleeders and Leakers: turn scattered opportunity into one annual number leadership can fund.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards and win-rate view checked before leadership set the next year's priorities.

That same instinct runs the Applied Materials seat today: align Sales, Engineering and Accounts into one view, then keep the OKRs and quarterly reviews current so the plan funds this year's priorities, not last year's.

What the first month inside Global Marketing Strategy and Operations looks like.

WEEK 1

Map the annual plan and its owners

Sit with Marketing, Product, Finance and Engineering stakeholders to learn how this year's plan was built and funded, and shadow one existing performance review end to end before changing anything.

Why first: the same instinct that had me learn Applied Materials' Sales, Engineering and Accounts loop before building on top of it.

WEEK 2-3

Own one performance evaluation end to end

Take one open question about Marketing's performance, build the model against the underlying data, and present a data-driven recommendation to leadership, the same loop that turned Bleeders and Leakers into a leadership decision at Sensata.

Why now: the fastest way to earn trust on an unfamiliar plan is to ship one complete recommendation, not a slide of open questions.

WEEK 4

Stand up the operational-efficiency process

Propose the recurring process that keeps that recommendation funded: who owns it, how often performance gets re-evaluated, and what triggers an adjustment to the approach, mirroring the weekly and quarterly reviews already running at Applied Materials and Sensata.

Why this fast: an annual plan across four functions only earns its keep if a process exists to re-check it every cycle instead of trusting the kickoff deck.

CLOSE

You are hiring someone to turn four functions worth of input into one annual plan leadership trusts and data keeps adjusting. I have already built that discipline, from the modeling side and the executive-deliverable side.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a \$627M target**, \$433M in margin opportunity surfaced for leadership, and a competitive benchmarking recommendation that drove **+8% market share**.

What sits alongside it is the planning and budget side of the same work: I built and defended **\$100K/month marketing budgets** to a leadership team at Plug Power, and I partner with senior executives on revenue models and site-transition strategy at Sensata today. The modeling, the stakeholder alignment and the executive deliverable are not three separate skills I would need to learn on the job.
