Hiring Team, Strava

Your posting describes a role that owns the bridge between PMM and Lifecycle Marketing, translating GTM briefs into scoped plans and targetable audiences, then project managing each launch through post-campaign analysis. At Sensata I built that exact translation layer: a SQL and GA4 KPI framework across 50K+ connected devices that turned raw usage data into adoption cohorts, which lifted feature adoption 18% after launch, while I ran the email and paid campaigns tied to that launch end to end, from creative handover through results review that shaped how the next one got scoped.

The hands-on martech build you describe, QAing campaigns in Iterable, Braze or Kevel, is work I have done with a different stack and the same logic. At Plug Power I automated the WordPress and Pardot lead flow myself, no handoff to an engineer, and wired Salesforce, Adobe Analytics and GTM into one closed-loop reporting system so campaign spend and conversion stopped living in separate spreadsheets. I also ran 15+ A/B tests there with real holdouts and bid-strategy controls, the kind of fair test design your posting asks for, not a before-and-after comparison dressed up as an experiment.

Retention is the other half of this role, and it is where I have spent the most time. At Pixis I cut client churn 50% across an 8-client portfolio through account-level retention strategy, and used Amplitude and Tableau across 30+ campaigns to separate what was actually driving retention from what looked good in a dashboard. That same instinct, log results against a shared benchmark instead of treating every campaign as a one-off, is what built the FY2026 Power BI dashboard I run now at Sensata, tracking 1,200 pricing opportunities against a shared target so every win gets compared the same way.

I have also run the cross-functional alignment piece without a title to back it up: at GenY Medium I was the main liaison between regional marketing, localization and analytics teams, keeping partners on timeline with no formal authority over any of them, which is close to what representing Retention across PMM, MarTech and Data alignment forums actually requires day to day. Proof trail at adhi-growth-ai.vercel.app/ref/strava if you want the launch, retention and martech work firsthand.
