

PITCH DECK | INTUIT INTEGRATED CAMPAIGN LEAD, MID-MARKET DEMAND GENERATION

Mid-Market campaigns usually break at the handoff, not the brief. I have already run that handoff end to end, at Sensata and at Plug Power.

Integrated campaign architecture, cross-channel orchestration and execution governance built by someone who runs that exact loop today.

\$2M+ first-year revenue, a Sensata GTM launch owned end to end

+35% qualified leads from one cross-channel email + paid launch

\$100K/month budgets run across 4 channels as one plan at Plug Power

-25% CPA, -50% CPL from unifying channel execution into one plan

Claude AI agents automate the recurring campaign reporting behind it

The risk in Mid-Market demand gen is not a missed number. It is a brief **three teams stop reading the same way.**

What a fast-moving mid-market motion runs into

A campaign brief written for email, paid, web, events and sales ages fast when each channel owner reads "done" differently, so launch readiness slips without anyone naming the slip.

Dependency tracking across a matrixed org is the part that quietly fails first: the brief looks fine, the workback looks fine, and the handoff between two teams is where the gap actually lives.

The fix is not another status meeting. It is one owned campaign architecture, a governance cadence that catches drift early, and the judgment to escalate before a launch date, not after.

What I have already run, at smaller scale

At **Sensata**, I owned a GTM launch end to end across North America and Europe: positioning, pricing, channel plan and cross-channel execution across email and paid media, closing \$2M+ in first-year revenue.

At **Plug Power**, I ran \$100K/month across Paid Search, Paid Social, SEO and lifecycle email as one integrated plan, then unified the Mar-Tech stack so dependency tracking lived in one place.

I run the escalation side of this today too: at **Pixis**, I cut client churn 50% by making the call before an account went sideways, the same judgment a matrixed campaign org needs.

Campaign architecture, cross-channel orchestration, launch readiness and connecting performance to business outcomes are one loop: own the brief, run every channel against it, govern the cadence, then prove it moved pipeline.

What the Integrated Campaign Lead opening asks for, and where the proof sits.

What the role covers

- "Developing campaign architecture across products and market segments."*
- "Cross-channel orchestration spanning email, paid media, web, events, and sales."*
- "Managing launch readiness and dependency tracking; running execution governance and operating cadences."*
- "Connecting campaign performance to business outcomes."*

My Proof

- Campaign architecture end to end at Sensata:** owned positioning through channel plan for a new product launch across two regions, closing \$2M+ in first-year revenue and +35% qualified leads.
- Cross-channel orchestration at Plug Power:** ran \$100K/month across Paid Search, Paid Social, SEO and lifecycle email as one plan, unifying the Mar-Tech stack for closed-loop, dependency-tracked reporting.
- Execution governance as a daily habit:** built leadership decks and ran OKRs with weekly and quarterly business reviews at every role, the operating cadence this posting calls governance.
- AI GTM fluency as a habit, not a pilot:** automates recurring campaign reporting and forecast analysis with Claude AI agents at Applied Materials today.

One integrated plan, four channels, **one forecast leadership signed off on.**

Owned \$100K/month marketing budgets across multiple business units and ran Paid Search, Paid Social, SEO and lifecycle email as one integrated plan instead of four separate ones, then unified the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) so dependency tracking and closed-loop reporting lived in one place, not four inboxes.

\$100K/mo

Budget Run as One Cross-Channel Plan

Paid Search, Paid Social, SEO and lifecycle email run as one plan with one forecast, not four teams reporting four different numbers.

-25%

CPA, via Bid Optimization & A/B Testing

Google Ads, Microsoft Ads, Meta and LinkedIn tuned against one shared budget-pacing model instead of siloed channel targets.

-50%

Cost Per Lead, via Lead-Flow Automation

Automated the WordPress and Pardot handoff so a lead's stage mapped straight to MQL quality and pipeline, closing the gap between marketing and sales.

The same role built the leadership decks and ran the OKR cadence that kept every channel owner reading the same "on track," plus 15+ A/B tests that kept the plan current instead of static, the launch-readiness discipline this role calls dependency tracking.

What the first month on Intuit's Mid-Market demand-gen team looks like.

WEEK 1 Map where the current brief and the handoff disagree Pull the live Mid-Market campaign briefs, workbacks and readiness docs across email, paid, web, events and sales, and trace where two channel owners read "ready to launch" differently. Sit with the matrixed stakeholder group to hear where that friction already surfaces. ----- Why first: the disagreement is visible in the workback before anyone names it. Same move that started the Plug Power Mar-Tech unification.	WEEK 2-3 Ship one campaign architecture and dependency tracker Build the integrated campaign brief and dependency tracker that email, paid, web, events and sales all read from, and pressure-test launch readiness against it with Sales before the first Mid-Market motion goes live. ----- Why now: one shared tracker, verified with the cross-functional group early, is what kept the Plug Power channels from drifting apart.	WEEK 4 Turn it into the operating cadence Package the Week 1-3 findings into the execution governance cadence leadership uses to track Mid-Market campaigns, plus the escalation path that flags a slipping dependency before launch day instead of after. ----- Why this fast: a tracker matters less if the cadence behind it stays ad hoc. Governance is the actual ask behind "execution governance and operating cadences."
---	--	--

CLOSE

You are hiring someone to make the Mid-Market campaign handoff hold. I have already run that handoff, the orchestration and the cadence underneath it.

The core proof is two roles working together: at [Sensata](#), I owned a GTM launch end to end that closed **\$2M+ in first-year revenue** and **+35% qualified leads**; at [Plug Power](#), I ran **\$100K/month** across four channels as one integrated plan, cutting CPA 25% and cost per lead 50% by unifying the reporting behind it.

What is harder to find is someone who also runs the governance side daily. I build leadership decks and run OKRs with weekly and quarterly reviews at every role, and I automate the recurring campaign reporting behind that cadence with Claude AI agents at Applied Materials today, which means the architecture-to-orchestration-to-governance loop behind this role is not something I would need to learn on the job.
