PITCH DECK | SIERRA GTM OPERATIONS, PRICING

Scaling outcomes-based pricing across more Fortune 500 deals without losing deal-desk rigor on any one of them.

A commercial-modeling and negotiation framework built from a multi-$100M industrial pricing book, applied to Sierra's enterprise agent deals.

- **$700K+** in margin recovered in 2 quarters by connecting pricing to measured customer value
- **53% to 61%** margin lift negotiated across an entire distribution network
- **$627M** pricing book modeled across 1,200 opportunities, 3 regions, 20 product lines
- **Builds and sells** a deal-pricing guardrail engine as a founder, into RevOps, Sales and Finance
- **Claude AI agents** automating recurring pricing analysis

THE PROBLEM THIS DECK SOLVES

Outcomes-based pricing scales a lot of enterprise conversations at once. The hard part is keeping deal-desk rigor identical on the tenth negotiation as on the first.

What breaks as deal volume grows

Every outcomes-based deal needs its own ROI case tied to that customer's actual metrics, so the commercial model cannot be a copy-paste template without losing credibility with Finance and the customer.

Negotiation leverage comes from knowing exactly how much daylight sits between what a customer currently pays for the problem and what Sierra's outcome is worth, deal by deal, not from a standard discount ladder.

A business case that convinces one Fortune 500 buyer does not automatically convince the next; each one needs its own evidence, built fast enough to not stall the sales cycle.

What I have already run, at comparable scale

At **Sensata**, I built a $627M commercial model covering 1,200 pricing opportunities across 3 regions and 20 product lines, each one scored on its own competitive gap and customer willingness to pay, not a flat rule.

I sat in the room for the **multimillion-dollar customer quotes** that model fed, negotiating with senior executives on both sides of the table.

As founder of **PriceKeel**, I sell a pricing business case myself, every week, into RevOps, Sales leadership and Finance who did not ask for a change.

> **This req asks for pricing strategy on major enterprise opportunities, commercial models and ROI analyses tied to measurable customer value, and sound judgment in high-stakes negotiations. That is the loop above, already run at scale.**

THE REQ, MAPPED

What this opening asks for, and where the proof sits.

What the role covers

Lead pricing strategy for major enterprise opportunities, from early customer discussions through negotiation and close.

Develop commercial models and ROI analyses connecting Sierra's performance to measurable customer value.

Bring clear analysis and sound judgment to high-stakes customer negotiations.

Partner across Sales, Operations, Product, Finance and Legal to turn new capabilities into scalable commercial offerings.

My Proof

Bleeders and Leakers at Sensata: led a commercial model from first competitive read through to a negotiated, closed quote, recovering $700K+ in 2 quarters.

53% to 61% distributor margins: an ROI case built on measurable customer value, negotiated across an entire channel, not one account.

Multimillion-dollar customer quotes and AP26 revenue models: built and defended alongside senior executives for a multi-$100M BU.

PriceKeel: cross-functional selling into RevOps, Sales leadership and Finance, the same partnership this role runs across Sales, Operations, Product, Finance and Legal.

THE PROOF, IN DEPTH

Bleeders and Leakers: a cross-product pricing and negotiation program against a $627M book.

Built as a commercial model covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, scoring each opportunity on competitive gap and customer willingness to pay, then turning the highest-value ones into negotiated outcomes.

$433M

Margin Gaps Surfaced

Ranked every pricing opportunity into one view so leadership could prioritize where a negotiation was worth the time.

$700K+

Margin Recovered in 2 Quarters

Closed by connecting each negotiation to the customer's own measurable value, not a standard discount rule.

53% to 61%

Distributor Margin Lift

A channel-wide repricing negotiation, built on the same ROI logic as a single enterprise deal, run at scale.

The same model fed multimillion-dollar customer quotes and AP26 revenue models negotiated directly with senior executives. The common thread: every deal's commercial case was built from that customer's own numbers, not a shared template.

FIRST 30 DAYS

What the first month on Sierra's enterprise pricing deals looks like.

WEEK 1

Learn the live pipeline and the commercial-model inputs

Sit with Sales, Operations and Finance on the open Fortune 500 opportunities, mapping what data each outcomes-based ROI case already draws on and where the model's inputs are thin.

Why first: the same first move behind the Bleeders and Leakers commercial model at Sensata.

WEEK 2-3

Build the ROI case for the highest-stakes live negotiation

Take one active enterprise negotiation, build the commercial model connecting Sierra's performance to that customer's measurable value, and bring it into the room alongside Sales and Legal.

Why now: the same deal-by-deal rigor that made the $700K recovery at Sensata hold under negotiation.

WEEK 4

Turn the model into a repeatable commercial offering

Package the ROI framework from that first deal into a scalable commercial offering Sales can reuse on the next Fortune 500 opportunity, with Product and Finance signed off.

Why this fast: the same discipline of selling a pricing change to people who did not ask for one, run every week at PriceKeel.

CLOSE

You are hiring someone to make outcomes-based pricing hold up under Fortune 500 scrutiny, deal after deal. I have already built and run that model once, at scale.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both negotiated off a $627M-opportunity commercial model built deal by deal, not off a template.

What is harder to find is someone who also sells the pricing case itself: as founder of **PriceKeel**, I build and pitch a deal-pricing guardrail engine into RevOps, Sales leadership and Finance every week, and at **Applied Materials** I automate recurring pricing analysis with Claude AI agents, the same operating habit that keeps a commercial model credible as deal volume scales.
