Hiring Team, Meta

Your posting for the Meta Model API side of this role asks for someone who can turn "AI developer and business needs" into a go-to-market plan before the product team has to guess. At Sensata, I owned the GTM for a new line of sensing products sold to OEM and distributor engineers, and the job was never writing a positioning doc. It was running 30+ structured interviews with the actual buyers, feeding that signal back into launch decisions, then arming 50+ reps with the materials to close on it. That loop drove \$2M+ in first-year revenue and a 30% lift in win rate.

The preferred qualifications on this req read like a description of how I already work, not a wish list. I automate my own recurring market-sizing and competitive analysis at Applied Materials with AI agents built on Claude, prompt by prompt, because rebuilding the same report every cycle is time that should go into the next launch. That is the "demonstrated ability to integrate AI tools to optimize workflows and drive measurable impact" the posting asks for, and it is also where I keep building: I treat prompt and context engineering as a skill to sharpen, not a line to mention once.

I also know what it takes to represent the market internally to Product, Engineering and Research, because that is the other half of my day job. At Applied Materials I turn field and technical input from Sales, Engineering and Accounts into one market view that shapes pricing and forecasting; at Sensata I tracked competitor and customer moves across EMEA and the US to keep product decisions grounded in reality, not assumption. Meta's AI developer tools move fast enough that the market view has to be rebuilt constantly, and that is the exact discipline I bring.

What I would bring to the Meta Model API team is someone who has already run the loop end to end: market assessment, positioning tested against a technical buyer, enablement that gets used by the teams carrying the deal, and AI built into how the work gets done rather than written about. Proof trail at adhi-product-ai.vercel.app/ref/meta.
