

PITCH DECK | RIPPLE SENIOR MANAGER, MARKETING ANALYTICS

One seat here turns scattered growth-marketing spend and CRM data into a pipeline-attribution story Finance and executives trust on sight. I have already built that system end to end.

A reporting infrastructure that ties campaign spend to pipeline and revenue, a CRM data-integrity habit, and the AI-powered automation to keep both running at scale.

\$433M in margin gaps surfaced via a BU-wide Power BI reporting system at Sensata

1,200 opportunities tracked against a \$627M target across 3 regions, 4 product families, 20 lines

CRM and CPQ run end to end, plus the Finance-auditable record behind it, founder of PriceKeel

+40% ROAS via Amplitude and Tableau incrementality reads at Pixis

Claude AI agents automating recurring forecasting and reporting at Applied Materials

A growth marketing engine scaling with AI needs one analytics seat holding spend, pipeline and CRM data to **the same, trusted story.**

What losing that discipline runs into

Growth marketing analytics without one owner does not fail loudly. It fails as three dashboards that disagree on last quarter's CAC, a CRM field nobody validated before the forecast ran on it, and an executive review that spends its first ten minutes reconciling numbers instead of deciding on budget.

Growth Marketing, Finance and RevOps all touch the same spend-to-pipeline data on its way to a board slide, so a gap in attribution or CRM data quality becomes everyone's problem at the next planning cycle, not just one team's.

The fix is not another dashboard. It is someone who treats measurement, CRM data integrity and AI-powered automation as one connected system instead of three separate tools.

What I have already run

At **Sensata**, I built a BU-wide Power BI system that tracked 1,200 pricing opportunities against a \$627M target and surfaced \$433M in margin gaps, the same spend-to-pipeline visualization this role owns for growth marketing.

At **PriceKeel**, I run the CRM and CPQ myself and built the audit trail Finance checks against, the CRM data-quality habit this role asks for across marketing and sales systems.

Both mean I have sat on the reporting side and the data-integrity side of the same system, not just one or the other.

A Senior Manager, Marketing Analytics who owns measurement across growth marketing, leads pipeline attribution and ROI analysis, and uses AI-powered tools to automate workflows and sharpen forecasting is describing this exact system: one owner, one trusted number, from spend to revenue.

What the Marketing Analytics opening asks for, and where the proof already sits.

What the role covers

- Own analytics and end-to-end measurement across all growth marketing functions, from campaign performance to pipeline attribution.*
- Lead the visualization and reporting infrastructure, translating complex data into clear dashboards and narratives for stakeholders at all levels.*
- Lead pipeline attribution, ROI, CAC, LTV and ad spend analyses; partner with Finance and RevOps on spend pacing and forecasting.*
- Apply AI-powered tools to automate reporting and surface proactive insights; ensure data quality and integrity across CRM and marketing systems.*

My Proof

- End-to-end measurement and reporting infrastructure:** built the FY2026 Bleeders and Leakers Power BI dashboard at Sensata, with pipeline funnel, regional scorecards, win rate and stage distribution across 1,200 opportunities and a \$627M target.
- Pipeline attribution and ROI:** at Pixis, ran Amplitude and Tableau incrementality reads across 30+ campaigns to separate paid lift from organic baseline, lifting ROAS 40%; at Sensata, built KPI frameworks in SQL and GA4 across 50K+ connected devices.
- Forecasting and budget partnership with Finance and RevOps:** partnered with senior executives on AP26 revenue models, and run forecast and pipeline reviews daily as founder of PriceKeel.
- AI-powered automation and CRM data integrity:** automate recurring forecasting and pricing analysis with Claude agents at Applied Materials; built and run PriceKeel's CRM, CPQ and Finance-auditable record.

Bleeders and Leakers: one dashboard that made spend-to-pipeline data a single trusted number.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with every gap traced to a specific deal before leadership set the next quarter's targets.

\$433M

Margin Gaps Surfaced

Every gap traced to a specific deal by salesperson and product line, the same record-level detail a pipeline-attribution report depends on.

\$700K+

Margin Recovered, 2 Quarters

Competitive-gap and willingness-to-pay analysis that directly informed spend decisions, the same investment-decision rigor this role brings to ad spend.

+40% ROAS

Pixis, Amplitude and Tableau

Incrementality reads across 30+ campaigns separated paid lift from organic baseline before the ROAS number went to leadership.

At PriceKeel that same instinct became the operating model: I run the CRM and CPQ and built the audit trail myself, so the number in the dashboard and the record behind it are never two different stories.

What the first month owning Marketing Analytics for Ripple's growth engine looks like.

WEEK 1

Map the current spend-to-pipeline data flow

Sit with Growth Marketing, Finance, RevOps and Business Intelligence to walk the path from ad spend and CRM records through to the dashboards leadership already reads, and flag where attribution or data quality is shakiest.

Why first: the same instinct that had me learn a BU's own pricing patterns before building the Bleeders and Leakers model on top of them.

WEEK 2-3

Own one pipeline-attribution report end to end

Take one growth channel's spend-to-pipeline reporting from raw Salesforce and ad-platform data to a dashboard, running a lift or incrementality read to separate real pipeline impact from coincidence.

Why now: the same deal-by-deal, number-by-number discipline that surfaced \$433M in margin gaps inside the Bleeders and Leakers program.

WEEK 4

Automate one recurring reporting workflow with AI

Pick the report that eats the most manual hours each week, automate it with an AI-powered workflow, and hand the freed time back to deeper attribution and forecasting work.

Why this fast: the same automation habit that already runs on Claude agents at Applied Materials.

CLOSE

You are hiring someone to make spend, pipeline and CRM data tell one honest story at scale. I have already built that system, from the dashboard side and the data side.

The core proof is Sensata: a Power BI system tracking **1,200 pricing opportunities against a \$627M target**, surfacing **\$433M in margin gaps**, paired with incrementality reads at Pixis that lifted ROAS **40%** by separating real lift from noise.

What is harder to find is someone who has also spent the last several months owning the CRM, CPQ and the Finance-auditable record behind his own company's pipeline. **I built that at PriceKeel**, and I already automate recurring analysis with Claude agents at Applied Materials, so the AI-powered side of this role is not something I would need to learn on the job, only which growth channel to point it at first.
