Hiring Team, Sitetracker

Scout is an agentic AI product, and I already run my own version of it. At Applied Materials, I automate recurring competitive and market analysis with AI agents built on Claude instead of rebuilding the same report by hand every cycle. That is not a resume line I am stretching to fit your req; it is the exact gap between "AI capability" and "something a customer can trust in a live deal" that your posting is asking a PMM to close for Scout.

Closing that gap under live-deal pressure is the part of this role I have already done. At Sensata, I built the sales-enablement system, battlecards, objection-handling content and the messaging underneath it, that armed 50+ reps on active sensing-product opportunities and moved their win rate 30%. I did not write that content from a brief; I ran 30+ structured interviews with OEMs and distributors first, so the language matched what customers were actually objecting to, not what Marketing assumed they would.

Executive-level deal support is not new either. As Sensata's Pricing Lead, I sat directly across from senior customer executives on multimillion-dollar quotes, carrying competitive and market intelligence I had tracked across EMEA and the US into the room so it showed up as a better answer, not a slide. That same intelligence loop fed counter-positioning back to Sales and leadership, which is the "actionable insight back to the broader PMM org" your posting describes.

The adoption half of this role, not just the sales-support half, is also familiar. I built KPI frameworks in SQL and GA4 across 50,000+ connected Sensata devices to find adoption signals inside an existing customer base, and separately cut client churn 50% at an AI ad platform through account strategy built on expanding usage, not just closing new logos. Proof trail, including the Claude-agent work, is at adhi-product-ai.vercel.app/ref/sitetracker.
