Hiring Team, Zscaler

Your posting asks for someone who treats deal, pipeline, renewal and usage data as the raw material for a pricing decision, not a report to file after the fact. That is the exact discipline behind the Bleeders and Leakers program I led at Sensata: I built a dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, used it to surface $433M in margin gaps, and closed $700K+ of that in 2 quarters through deal-by-deal negotiation rather than a blanket policy change.

The preferred qualification that caught my attention is the one about building AI tools that move pricing strategy forward, because that is literally what I am doing right now. I founded PriceKeel, a decision-integrity layer for B2B SaaS deal pricing that reads a live discount exception and recommends an explainable guardrail learned from a company's own closed-won and closed-lost deals, with an audit trail Finance can review on every call. I run its CRM, CPQ, forecast and pipeline reviews and deal approvals myself, and at Applied Materials I automate my own recurring pricing analysis with AI agents built on Claude instead of rebuilding the same report every cycle.

Consistency across regions, segments and channels is the other half of this role, and it is the half I have already been graded on. At Sensata I raised distributor and channel-partner margins from 53% to 61% in under two quarters by repricing parts sold through distribution so the gain held past the first renewal cycle, and I partnered directly with senior executives on AP26 revenue models and multimillion-dollar customer quotes, driving +12% YoY revenue and +8% market share through price realignment benchmarked against 10+ competitors.

What I would bring to Zscaler's pricing and packaging team is someone who has already closed a quantified margin gap inside a multi-$100M business and built the AI-native tooling a modern pricing org is starting to ask for. Proof trail at adhi-pricing-ai.vercel.app/ref/zscaler.
