PITCH DECK | ZSCALER SENIOR PRODUCT PRICING MANAGER

Zscaler's pricing and packaging team needs someone who turns deal, pipeline and renewal data into a business case fast enough to keep pace across regions, segments and channels. I have already run that exact program, with a number on it.

Pricing analytics, margin recovery and AI-built pricing tooling from someone who builds this exact product on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via repricing logic that stuck
- **PriceKeel** - founder of an AI-built discount-guardrail engine and Finance audit trail
- **+12% YoY / +8% share** via price realignment benchmarked against 10+ competitors
- **AI agents built on Claude** automating recurring pricing analysis

WHY THIS DECK EXISTS

The problem is not that Zscaler lacks a pricing framework. It is that deal, pipeline, renewal and usage data for a SASE platform change faster than any quarterly pricing review can track, and someone has to turn that into a business case Sales, Product and Finance all act on.

What this seat actually requires

Analyzing deal, pipeline, renewal and product-usage data continuously to catch commercial risk and opportunity before it shows up in a quarterly review.

Building business cases and financial models that survive contact with Sales, Product, Finance and Marketing, not a spreadsheet that only the pricing team trusts.

Keeping pricing execution consistent across regions, segments and sales channels as the product line and the go-to-market motion both keep expanding.

What I have already run

At **Sensata**, I built a BU-wide Power BI system tracking 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, the same deal/pipeline data discipline this seat runs company-wide.

At **PriceKeel**, I built an AI-powered guardrail engine and Finance audit trail from zero, the development of an AI-built tool that moves pricing strategy execution forward this posting calls out by name.

I partnered directly with senior executives on **AP26 revenue models** and multimillion-dollar customer quotes, the same business-case rigor this role brings to Zscaler's leadership team.

The through-line: every pricing system I have touched started with "this data needs to become a decision, not a deck" and ended with a number leadership could act on.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Analyze deal, pipeline, renewal, and product-usage data to identify commercial opportunities and risks."*

> *"Build business cases and financial models to evaluate strategic initiatives... drive consistent pricing strategy execution across regions, segments, and sales channels."*

> *"Demonstrated curiosity and active exploration of AI tools... development of AI built tools that move pricing strategy execution forward."*

My proof

Deal/pipeline/renewal data to commercial decisions: built the FY2026 Bleeders and Leakers Power BI dashboard surfacing $433M in margin gaps across 1,200 pricing opportunities for leadership to prioritize.

Business cases that hold up cross-functionally: partnered with senior executives on AP26 revenue models and multimillion-dollar customer quotes, and closed $700K+ of recovered margin through deal-by-deal negotiation.

Consistent execution across regions and channels: raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through distribution so the gain held past renewal.

AI tools and AI-built tooling: founded PriceKeel's AI-built guardrail engine and automate my own recurring pricing analysis with AI agents built on Claude at Applied Materials.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the margin leak, build the case, close it, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by product line, so leadership could prioritize instead of chasing anecdotes.

$433M

Margin Shortfall Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay, the same data-to-decision triage a pricing analytics seat runs continuously.

$700K+

Margin Recovered in 2 Quarters

Closed through deal-by-deal negotiation on a documented business case, not an across-the-board policy change.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself, so the gain held past the first renewal cycle instead of drifting back.

The same BU also drove +12% YoY revenue and +8% market share through price realignment benchmarked against 10+ competitors. The common thread: every fix was built on data, priced as a business case, and measured after it shipped.

FIRST 30 DAYS

What the first month inside Zscaler's pricing and packaging team looks like.

WEEK 1

Map the deal, pipeline and renewal data that already exists

Sit with Sales, Product and Finance to find where today's commercial opportunities and risks already show up in the data but are not yet surfaced as a decision, the same discovery step that started the Bleeders and Leakers program at Sensata.

Why first: find the leak in the data before naming the fix.

WEEK 2-3

Ship the first business case and financial model

Build the first business case for a strategic pricing or packaging initiative, pressure-test the financial model with Product and Finance, and ship it as a recommendation Sales can execute consistently across regions and segments.

Why now: the same deal-by-deal modeling discipline that made the 53% to 61% distributor gain stick instead of drift back.

WEEK 4

Bring an AI-built tool into the workflow

Automate the recurring parts of that analysis with an AI agent, so the next pricing review starts from a flagged opportunity instead of a blank spreadsheet, the same habit that moves pricing strategy execution forward rather than waiting on it.

Why this fast: the same AI-agent habit that keeps my own recurring reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to turn deal, pipeline and renewal data into business cases that hold up across regions, segments and channels. I have already run that program, with a number on it each time.

The margin half: **$700K+ recovered in 2 quarters** and distributor margins lifted **from 53% to 61%** at Sensata, plus +12% YoY revenue and +8% market share through price realignment benchmarked against 10+ competitors.

The build half: **PriceKeel's AI-built guardrail engine** and Finance audit trail, built from zero, running my own CRM, CPQ and deal approvals end to end. At Applied Materials I automate my own recurring pricing analysis with AI agents built on Claude instead of rebuilding the same report every cycle.
