PITCH DECK | SPACEXSI DEAL DESK ANALYST

SpaceXSI's deal desk needs someone who can close a non-standard enterprise deal with executives today, then turn that exception into an approval workflow and playbook so the next ten reps do not need you in the room. I already run that exact loop.

Deal strategy, pattern-spotting analytics and AI-built deal-approval tooling from someone who built a deal desk from zero on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **Multimillion-dollar customer quotes** and AP26 revenue models closed with executives on non-standard terms
- **PriceKeel** - founder running my own CRM, CPQ, approval workflow and audit trail
- **$627M** deal-pricing opportunity dashboard across 3 regions, 20 product lines
- **AI agents built on Claude** automating recurring deal and pricing analysis

WHY THIS DECK EXISTS

The hard part of this seat is not closing one enterprise deal. It is turning every non-standard exception into an approval workflow, contracting playbook and pricing guardrail while sales keeps closing at volume.

What this seat actually requires

Structuring and closing complex enterprise deals across pricing, competitive positioning, negotiation approach, contract structure and executive engagement, partnering across Sales, Legal, Finance and Business Operations.

Systematizing approval workflows, contracting playbooks, pricing guardrails and sales enablement so the deal desk is not the bottleneck as deal volume scales across the Americas team.

Partnering with the GTM systems team to improve the tools already in place, Salesforce, Ironclad and pricing infrastructure, without needing to build them alone.

What I have already run

At **Sensata**, I closed AP26 revenue models and multimillion-dollar customer quotes with senior executives on non-standard terms for a multi-$100M business, the same executive-engagement muscle this seat runs deal by deal.

At **PriceKeel**, I built the discount guardrail and approval matrix from zero, running my own CRM, CPQ and quote-to-approval workflow end to end with a Finance audit trail on every exception.

At Sensata I built a BU-wide Power BI system tracking 1,200 pricing opportunities against a $627M target, the same pattern-spotting-for-finance discipline this seat is asked to run company-wide.

The through-line: every deal desk system I have touched started with "this exception needs a rule, not a one-off approval" and ended with a number leadership could act on.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Partner with Americas sales, legal, finance, and revenue operations to structure, negotiate, and close complex enterprise deals."*

> *"Help evolve our pricing model and deal frameworks... surfacing the patterns to finance and leadership, and driving the changes through."*

> *"Lead cross-functional projects that systematize how we operate at scale: approval workflows, contracting playbooks, pricing guardrails, sales enablement materials, deal desk operating cadence."*

My proof

Cross-functional deal structuring: closed multimillion-dollar customer quotes and AP26 revenue models with senior executives across Sales and Finance on non-standard Sensata deal terms.

Evolving the pricing model: built competitive, value-based pricing at Applied Materials and raised distributor margins from 53% to 61% at Sensata by repricing the model itself, not a one-time discount.

Systematizing at scale: founded PriceKeel's guardrail engine and approval matrix from zero, running CRM, CPQ and the Finance audit trail end to end, the same approval-workflow and playbook build this role asks for.

Pattern-spotting for finance and leadership: built the FY2026 Bleeders and Leakers dashboard surfacing $433M in margin gaps across 1,200 opportunities for leadership to prioritize.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the margin leak, price the fix, close it with executives, make the number hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by product line, so leadership could prioritize deals instead of chasing anecdotes.

$433M

Margin Shortfall Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay, the same deal-triage call a deal desk makes on every escalated exception.

$700K+

Margin Recovered in 2 Quarters

Closed through deal-by-deal negotiation on a documented business case, not an across-the-board discount change.

53% to 61%

Distributor Margin Lift

Repriced the renewal terms themselves, so the gain held past the first renewal cycle instead of drifting back.

The same BU also closed AP26 revenue models and multimillion-dollar customer quotes on non-standard terms with senior executives, driving +12% YoY revenue and +8% market share. The common thread: every deal was priced on data, approved against a matrix, and measured after it closed.

FIRST 30 DAYS

What the first month inside SpaceXSI's Americas deal desk looks like.

WEEK 1

Map today's approval workflows, playbooks and guardrails

Sit with Sales, Legal, Finance and the GTM systems team to find where exceptions already escalate informally inside Salesforce and Ironclad instead of against a matrix, the same discovery step that started the Bleeders and Leakers program at Sensata.

Why first: find the leak in the workflow before naming the fix.

WEEK 2-3

Ship the first deal-pattern report to finance and leadership

Build the first dashboard surfacing deal-flow trends across reps, then coach reps on deal strategy, competitive positioning and negotiation approach using that data, the same deal-by-deal discipline that made the 53% to 61% distributor gain stick instead of drift back.

Why now: a documented pattern moves faster through finance than an anecdote does.

WEEK 4

Turn the first repeat exception into a playbook

Partner with the GTM systems team to automate the recurring approval-matrix check with an AI agent, so the next quote starts from a flagged exception instead of a manual review, the same AI-agent habit that keeps my own recurring pricing analysis moving at Applied Materials today.

Why this fast: the same guardrail-engine thinking that runs PriceKeel's own deal approvals, not a plan for someday.

CLOSE

You are hiring someone to close complex enterprise deals with executives and turn every repeat exception into a workflow the whole Americas team can run on. I have already built that exact loop, with a number on it each time.

The deal half: **multimillion-dollar customer quotes and AP26 revenue models** closed with senior executives at Sensata, plus **$700K+ recovered in 2 quarters** and distributor margins lifted **from 53% to 61%**, driving +12% YoY revenue and +8% market share.

The build half: **PriceKeel's guardrail engine, approval matrix and Finance audit trail**, built from zero, running my own CRM, CPQ and quote-to-approval workflow end to end. At Applied Materials I automate my own recurring pricing analysis with AI agents built on Claude instead of rebuilding the same report every cycle.
