Hiring Team, Scale AI

Your posting asks for one person to own deal pricing across Land, Expansion and Framework deals and keep a pricing dashboard current enough for Sales and Deal Desk leadership to trust it. That is almost exactly the program I ran at Sensata: I built the FY2026 Bleeders and Leakers dashboard in Power BI, ranking 1,200 pricing opportunities against a $627M target across 3 regions and 4 product families, then used it to recover $700K in margin in 2 quarters by structuring deal-by-deal pricing exceptions instead of letting them sit.

The part of that program that maps most directly to your req is the approval side. Raising distributor and channel-partner margins from 53% to 61% meant finding where the old pricing logic had quietly drifted, then routing the fix through Sales, Finance and, for the larger quotes, Legal and senior executives for sign-off. I was doing the same cross-functional deal coordination your Enterprise Pricing Manager will own with Accounting, Finance, EPD and Legal, and I carried P&L and revenue targets through the same quarterly forecasting cycle, which is why the dashboard had to hold up under a leadership review and not just look good in a deck.

At Applied Materials now I build the forecasting models behind a fast-moving, highly technical equipment market, and I have automated the recurring parts of that analysis with AI agents built on Claude so more of the week goes to the actual pricing call. I bring that same habit of looking for the repeatable mechanism, not just the one-off fix, which is what standardizing a recurring pricing step actually requires.

What I think sets me apart for this specific req is that I am also building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, in pilots right now. It reviews a live discount exception and recommends an explainable guardrail learned from a company's own closed-won and closed-lost deals, with an audit trail Finance can act on. I am effectively building the tool category your dashboard and your approval-bottleneck problem both live in, which means I show up already thinking in deal-health metrics rather than learning the vocabulary on the job.
