Hiring Team, Vaia

Right now I am the person a founder leans on because I run that job on my own company. At PriceKeel I am leading the first-round raise directly with investors while running pilots with early customers, and I built the CRM, CPQ, forecast reviews and the audit trail Finance uses to trust a pricing call, all without anyone to hand the ambiguous parts to. That is the exact shape of the connective-tissue work you described: owning a high-stakes initiative end to end because the founder cannot get to it alone.

I carry that same instinct inside a much larger company. At Applied Materials I sit between Sales, Engineering and Accounts, turning scattered field input into one market-sizing view leadership can act on, and I run the OKR cadence behind weekly and quarterly business reviews so cross-functional teams stay pointed at the same number. At Sensata I worked close enough to the executive team to shape the AP26 revenue models and site-transition strategy myself, and recovered \$700K plus in margin in two quarters by taking an ambiguous pricing problem to a negotiated outcome. Both jobs required getting people outside my own function to move on work I had done, which is the real test of a Chief of Staff seat spanning engineering, product and finance.

The AI and fintech angle is not a reach for me either: PriceKeel is an AI-native product built for Finance and RevOps, I shipped an AI job-matching platform on the OpenAI API from a blank PRD, and I already run Claude agents to automate the research work in my current role, so a technical AI roadmap conversation with your engineering team is familiar ground, not new ground. BITS Pilani is also where I first ran a venture end to end at Qbox, which is probably why founder-proxy work keeps finding me.
