PITCH DECK | FIVETRAN ENTERPRISE DEMAND GENERATION LEAD - NORTH AMERICA

Fivetran needs someone who owns the AMER Enterprise pipeline number end to end, from the first paid-social touchpoint to the Stage 1 opportunity, not a media plan that stops at the lead. I already run that full chain.

A paid-acquisition-to-pipeline system built and measured at $100K/month scale, plus the Claude-run reporting loop that keeps it honest every week.

- **-25% CPA** from $100K/month paid budgets across Google, Microsoft, Meta and LinkedIn
- **15+ A/B tests** tied directly to MQL quality and Stage 1 opportunity volume
- **+35% qualified leads** from paid and content launch programs at Sensata
- **Churn -50%** from reallocating an 8-client, $15K-90K/month paid-media portfolio
- **AI agents built on Claude** automating my own recurring reporting at Applied Materials

WHY THIS DECK EXISTS

The role is not "run paid social." It is owning the AMER Enterprise pipeline number from the first touchpoint through the Stage 1 opportunity, with budget that moves toward whatever gets there fastest.

What that actually requires

A paid-social and content motion across LinkedIn, Meta and adjacent channels, judged by MQL and Stage 1 output, not clicks or form fills.

Budget that shifts weekly toward whatever channel, audience or offer is converting, pulled from whatever is not.

A funnel view that explains the touchpoint-to-MQL-to-opportunity drop-off, not just a final lead count.

What I have already run

At **Plug Power**, I owned $100K/month across Google, Microsoft, Meta and LinkedIn and ran 15+ A/B tests tied directly to MQL quality and Stage 1 volume.

At **Pixis**, I reallocated an 8-client, $15K-90K/month portfolio toward what converted, cutting churn 50% in the process.

At **Sensata**, paid and content launch programs drove +35% qualified leads, built on SQL and GA4 funnel work underneath them.

> The through-line: every budget I have run got judged by what happened after the click, and got reallocated the same week based on that answer.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Own the AMER Enterprise pipeline target for your programs, translating S1 goals into actionable touchpoint, MQL, and campaign plans."*

> *"Launch and optimize paid media campaigns across Meta, Reddit, and LinkedIn, managing audiences, creative, budgets, and performance."*

> *"Allocate program budgets based on pipeline impact, balancing acquisition volume, lead quality, and efficiency."*

My proof

Plug Power, the pipeline translation: $100K/month across Google, Microsoft, Meta and LinkedIn, with 15+ A/B tests tied to MQL quality and Stage 1 volume, not just lead count.

Plug Power, the platform execution: owned audiences, creative, bids and budgets across four paid channels at once, cutting CPA 25%.

Pixis, the budget-reallocation discipline: shifted an 8-client, $15K-90K/month portfolio toward what converted, the same volume-quality-efficiency balance this role runs on.

Applied Materials, the AI-assisted version: automate the recurring reporting with Claude agents so the reallocation call ships faster, not slower.

THE PROOF, IN DEPTH

Own the budget, test fast, then move money toward what is producing pipeline.

Same pattern across three companies: own the number, run the test, and reallocate the same week based on what the funnel says, not the quarter.

-25% CPA

$100K/Month Across 4 Paid Channels

Google, Microsoft, Meta and LinkedIn budgets owned end to end at Plug Power, with bid and creative decisions made weekly.

15+ A/B Tests

Tied to MQL and Stage 1 Volume

Test-and-learn cycles at Plug Power judged by pipeline-stage opportunities, not click-through rate.

Churn -50%

Budget Reallocated Across 8 Clients

Pixis portfolio ($15K-90K/month per client) shifted toward what converted, away from what did not.

None of these were media reports that sat in a deck. Each one moved a pipeline number leadership was accountable for.

FIRST 30 DAYS

What the first month on the AMER Enterprise pipeline number looks like.

WEEK 1

Map the touchpoint-to-S1 funnel

Build the first touchpoint-to-MQL-to-Stage-1 view for the AMER Enterprise motion, so budget decisions start from where the funnel actually breaks, not a guess.

Why first: the same diagnostic that let 15+ A/B tests at Plug Power target the stage that needed it, not the whole funnel at once.

WEEK 2-3

Launch and tune the paid-social programs

Stand up or tighten the LinkedIn and Meta programs against priority Enterprise accounts and buying groups, with Reddit and content-syndication tests queued behind whichever channel shows the fastest signal.

Why now: the same channel-by-channel reallocation that cut Pixis churn 50% and Plug Power's CPA 25%.

WEEK 4

Automate the reporting loop

Stand up the weekly pipeline-impact report (touchpoint, MQL, Stage 1, cost per stage) and put the first Claude agent behind its recurring parts.

Why this fast: the same AI-assisted reporting habit already running at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to own the AMER Enterprise pipeline number end to end, from the first paid-social touchpoint to the Stage 1 opportunity. I have already run that full chain.

The execution half: **$100K/month across four paid channels** at Plug Power, cutting CPA 25% through 15+ A/B tests tied to MQL and Stage 1 volume, not click-through rate.

The reallocation half: an **8-client, $15K-90K/month portfolio** at Pixis shifted toward what converted, cutting churn 50%, plus the Claude-run reporting habit I already use at Applied Materials to keep that call moving every week instead of every quarter.
