PITCH DECK | POINTCLICKCARE SR. MONETIZATION STRATEGY & PRICING MANAGER

PointClickCare prices and packages one platform across 30,000 provider orgs and a 400+ partner Marketplace. I have already run that exact multi-segment pricing problem, and I build the tool that governs it.

Pricing and packaging strategy, new-product monetization, and AI-driven financial modeling from someone who also builds pricing tools on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via repricing logic that stuck
- **1,200** pricing opportunities ranked against a $627M target, 3 regions
- **PriceKeel** - founder of a decision-integrity layer for B2B deal pricing
- **+12% YoY revenue, +8% share** via price realignment vs. 10+ competitors

WHY THIS DECK EXISTS

The problem is not that PointClickCare lacks pricing data. It is that packaging one platform across many provider segments multiplies every pricing decision.

What pricing across many segments and partners runs into

Post-acute and long-term care providers range from small operators to large enterprise groups, so one packaging and discounting framework has to flex without turning into a different deal every time.

A 400+ partner Marketplace means a new-product monetization call also touches partner economics, not just the core platform price, so the math has more moving pieces than a single-SKU product.

Without one pricing logic that Product, Sales, RevOps and Finance all hold to, running AI tools faster through pricing models just produces a worse decision faster, not a better one.

What I have already run, at smaller scale

At **Sensata**, I led global pricing and packaging strategy for a multi-$100M Industrial BU across multiple product lines at once, the same many-segments-one-logic problem.

I ran the **Bleeders and Leakers program**: a Power BI system that ranked pricing opportunities by region and product family against a hard revenue target, so leadership knew exactly where to act.

I am building **PriceKeel** now: an audit trail that gives Finance evidence for every discount decision, because the leak comes back if nobody can explain why the last exception was approved.

A Senior Monetization Strategy & Pricing Manager who develops pricing and packaging strategy, monetizes new products, and tracks ASP, discount rate, attach rate and margin impact with AI tools across Product, Marketing, Sales, RevOps and Finance, is describing this exact loop: one pricing logic for many segments and partners, proven with a model, held together across teams.

THE REQ, MAPPED

What the Sr. Monetization Strategy & Pricing Manager opening asks for, and where the proof sits.

What the role covers

> *"Develop, optimize and execute pricing and packaging strategies...own select pricing projects and support the Director in broader strategic initiatives."*

> *"Partner cross-functionally to support the monetization and go-to-market strategy for new product offerings and feature launches."*

> *"Leverage AI tools to develop pricing models...and track key pricing and monetization KPIs (ASP, ARPU, discount rates, price realization, attach rates, margin impact)."*

My Proof

Pricing and packaging strategy: led the development of global pricing and packaging strategy for Sensata's Industrial BU, a multi-$100M business spanning multiple product lines, while carrying P&L and revenue targets.

New-product monetization: owned the GTM and monetization strategy for new sensing products at Sensata, driving $2M+ first-year revenue and running 30+ willingness-to-pay interviews before launch.

AI-driven pricing models and KPI tracking: automate pricing analysis and market research with AI agents built on Claude at Applied Materials, and built the Power BI system monitoring win rate, avg $/win, stage distribution and margin impact across 1,200 opportunities.

Cross-functional collaboration and complex-deal support: the 53% to 61% distributor repricing needed sign-off from Finance on the model and Sales on what a partner would accept; PriceKeel's audit trail does the same for every discount exception today.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the leak, close it, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

$433M

Margin Gaps Surfaced

The dashboard's job: rank every pricing opportunity by competitive gap and customer willingness to pay so leadership could prioritize instead of chasing anecdotes.

$700K+

Margin Recovered in 2 Quarters

Closed through cross-functional negotiations built on competitive analysis, not an across-the-board price hike.

53% to 61%

Distributor Margin Lift

Repriced the channel's discounting framework itself, so the gain outlived the initial repricing pass instead of drifting back within a quarter.

The same BU also ran a financial model flagging line items where a price change could lift profitability more than 50%, and multimillion-dollar customer quotes built alongside senior executives. The common thread: every fix crossed at least two functions, and every fix was measured after it shipped, the same discipline a platform billing 30,000 provider organizations needs before a packaging change goes live.

FIRST 30 DAYS

What the first month on PointClickCare's monetization and pricing desk looks like.

WEEK 1

Map the packaging landscape

Pull the last 90 days of discount exceptions and new-feature monetization asks across provider segments and the Marketplace. Sit with Product, Sales and Finance to hear where one packaging rule breaks down on a mixed-segment deal.

Why first: the leak is usually visible in the data before anyone has named it out loud. Same move that started the Bleeders and Leakers program.

WEEK 2-3

Build the AI-assisted model and pressure-test

Build a financial model tracking ASP, discount rate, attach rate and margin impact for one real pricing or packaging question, then pressure-test it with Sales and RevOps before proposing a fix with a documented, agreed reason.

Why now: modeling against a hard target, then verifying the fix cross-functionally, is what made the 53% to 61% distributor gain stick.

WEEK 4

Make it repeatable

Turn the one-off fix into a template: a discounting framework, a sales-enablement one-pager, and a KPI dashboard Sales and Finance both sign off on before the next packaging question comes in.

Why this fast: pricing strategy matters less if it only works once. Repeatability is the actual ask behind "support the Director in broader strategic initiatives."

CLOSE

You are hiring someone to run pricing and packaging strategy across 30,000 provider orgs and a 400+ partner Marketplace. I have already run that exact problem at smaller scale, and I am building the tool for the next scale up.

The core proof is Sensata: **$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **+12% YoY revenue with +8% market share** from price realignment against 10+ competitors, all run cross-functionally with Sales and Finance while carrying P&L targets for the BU.

What is harder to find is someone who already runs the "leverage AI tools for pricing models" part of this req today. **I automate pricing analysis and market research with Claude agents at Applied Materials**, and I am building PriceKeel's discount-governance product on the side, so the AI-driven, cross-functional pricing instinct this role asks for is not something I would need to develop on the job.
