Hiring Team, Sierra

Two quarters into the Bleeders and Leakers program at Sensata, I had recovered \$700K in margin by building a Power BI dashboard that ranked 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, then translated each one into a case an account team could actually act on. That is the same translation work your posting describes: turning Sierra's impact into ROI models and investment cases that hold up in front of a customer's finance and operations leadership, not just a technical milestone report.

The margin recovery was never a one-person spreadsheet exercise. Raising distributor and channel-partner margins from 53% to 61% meant sitting with Finance on the model, with Sales on what a partner would actually accept, and with senior executives on the AP26 revenue models and multimillion-dollar customer quotes that carried those numbers into the room. I was doing that work while carrying P&L and revenue targets for a multi-\$100M industrial business, which is the same weight a business case has to carry when it is the reason an enterprise buyer signs.

What I think sets me apart for this specific opening is that I am not asking you to trust that I can build a business value framework from scratch. I am doing it right now at PriceKeel: designing a guardrail engine and an audit trail that give Finance a documented, explainable reason behind every pricing decision, the same rigor your posting asks for in establishing Sierra's business value methodology from the ground up. At Applied Materials I also automate the recurring parts of that analysis with AI agents built on Claude, so the operator instinct and the AI-native habits both come from the same few months, not from two different careers I am trying to stitch together.

I would like to bring both halves of that to Sierra: someone who has already closed a quantified margin gap inside a large, multi-product organization, and someone who is currently building the tool that makes that kind of business case repeatable. Proof trail at adhi-pricing-ai.vercel.app/ref/sierra.
