Hiring Team, Macroscope

Your posting asks for someone who can turn a technically complex product into a story developers actually want to read, not inherit a positioning deck from someone else. At Sensata, I owned GTM, positioning and messaging for a new sensing-product line and turned dense engineering specs into buyer-ready stories, lifting launch conversion 15% and driving $2M+ in first-year revenue. That is the same muscle a founding GTM hire needs: nobody hands you the narrative, you build it from the product up.

I did not learn how technical buyers evaluate a product from a dashboard. I ran 30+ structured interviews with OEMs and distributors to learn where they got stuck and what made them trust a new technical product, then fed that straight into messaging and a sales-enablement system, decks, case studies and battlecards, that armed 50+ reps and moved win rates 30%. Tracking competitor moves across EMEA and the US kept that positioning current instead of static.

I also know what it is to build the whole GTM function with no playbook. I shipped an AI job-matching platform from a blank page, Python, OpenAI API, React, owning ICP, competitor teardowns, pricing and the growth experiments myself because there was no team to hand any of it to. That is the operating mode your posting describes: extremely high agency, comfortable in ambiguity, measuring what works and dropping what does not.

At Applied Materials today I automate my own recurring competitive and market analysis with AI agents built on Claude instead of rebuilding the same report every cycle, time that would go straight into Macroscope's launches and developer community work instead. Proof trail at adhi-product-ai.vercel.app/ref/macroscope.
