Hiring Team, Varonis

Your posting for Competitive Intelligence Analyst asks for proactive, competitor-specific help that reaches a deal before a competitor stalls it, not after. At Sensata, a $433M margin-gap read I built from a live competitor-and-customer benchmarking dashboard did not sit in a slide deck. It went straight to the sellers running the deals it was about, and the price realignment behind it moved market share 8% and revenue 12% year over year. That is the posture your req is describing, and it is the one I already work in.

I have not built a battlecard on Varonis's exact template, but I have built what a battlecard is for. At Sensata I turned top-three competitor teardowns and POS account reviews into distribution-strategy recommendations, then built the sales enablement, decks and case studies, that 50+ reps used in the field, lifting win rates 30%. Call it a battlecard or a kill sheet, the job is the same: take a technical read on a competitor and compress it into something a rep can use in the room before the deal moves.

Quarterly win-loss and competitor tracking is close to how I already operate. I ran competitor and customer analysis across EMEA and the US at Sensata, gathered win-loss signal from 30+ customer interviews with OEMs and distributors, and at Applied Materials I now automate the recurring side of that research with AI agents built on Claude, so the read stays current instead of going stale between quarters.

Data, identity and cloud security is a market I would be tracking for the first time, and I like what it rewards: breaking a complex technical system down into the one insight a seller needs before a deal moves, which is the part of this work I have already spent three jobs doing. Proof trail at adhithyabhaskar.vercel.app/ref/varonis.
