Hiring Team, PagerDuty

PagerDuty's 14,000+ Commercial customers is the kind of scale where a shared lifecycle template quietly stops working, and that is the exact problem I solved at Pixis: I moved an 8-account portfolio off one playbook onto segmented, proactive retention strategies built around each account's own usage signal, cutting client churn 50%. The instinct behind that program, read the engagement data, decide what to adjust or kill, then only scale what is working, is the same one this role runs on.

Rebuilding an automated lead-flow pipeline end to end is exactly how I would approach the Marketo and Gong Engage journeys this role is built around: at Plug Power I rewired the WordPress-to-Pardot lead flow from scratch, sequencing every nurture touch by engagement signal instead of a fixed send date, and cut cost per lead 50%. That is the same automated-journey architecture behind email, in-app and Slack programs, just pointed at a different funnel stage.

I already build with Claude day to day. At Applied Materials I am automating repetitive forecasting and pricing analysis with AI agents built on it, and the SQL and GA4 behavioral triggers I built at Sensata flagged high-intent cohorts across 50,000+ connected devices before anyone had to ask. Turning that kind of signal into a recommendation that Sales, CS and senior leadership can act on, not just report on after the fact, is the part of this role I would enjoy most.

I would rather show than tell. Proof trail at adhi-growth-ai.vercel.app/ref/pagerduty.
