Hiring Team, DoorDash

Your posting wants someone who pulls their own data in SQL and models it in Excel instead of waiting on an analytics team to hand over a number, so here's the proof point: at Sensata I built the FY2026 Bleeders and Leakers dashboard in Power BI from scratch, tracking 1,200 pricing opportunities against a $627M target across 3 regions, and used it to surface $433M in margin gaps that leadership could act on within the week.

The 0 to 1 shape of this role is also one I have run before. At Sensata I took a new sensing product line from zero, positioning, pricing and channel with no existing playbook, and it drove $2M plus in first-year revenue. At Applied Materials I partner with Sales, Engineering and Accounts to size a market that none of those functions could map alone, the same cross-functional pull this seat needs across Product, Analytics, Finance, Marketing and Sales.

I like solving from first principles rather than inheriting "this is how it's always been done." At Sensata that meant negotiating channel-partner terms off competitive and willingness-to-pay data instead of list price, raising distributor margins from 53 to 61 percent in under two quarters. That's the instinct I would bring to growing restaurant selection and deepening merchant partnerships here: own the visible number, build the analysis yourself, and let the data make the case to partners and to the team.

I would welcome the chance to talk about how the Restaurant Growth team is prioritizing its next 0 to 1 launch. More of the work is at adhithyabhaskar.vercel.app/ref/doordash.
