

PITCH DECK | APOLLO.IO DEAL DESK ANALYST

Apollo's Deal Desk needs someone who has already traced a reconciliation gap back to its root cause. I have done that at \$700K+ scale.

Order form review, exception routing and an audit trail that reconciles Salesforce against the contract it actually shipped, from someone who has run this loop, not just described it.

\$700K+ margin recovered in 2 quarters, root cause fixed each time

53% to 61% distributor margin lift via discount-logic repricing

\$627M pipeline audited, 1,200 opportunities, \$433M in gaps traced to cause

PriceKeel - founder, reviews every discount exception before it reaches Legal

Claude AI agents - automates recurring deal-review steps at Applied Materials

The posting is direct: catch the reconciliation gap before it hits billing, and fix the pattern, not just the deal.

What losing that discipline runs into

A Deal Desk without a real root-cause habit does not fail loudly. It fails as an order form with a non-standard term nobody flagged, a closed-won deal whose Salesforce record drifts from the contract, and a billing error traced back a quarter late.

Legal, provisioning, RevOps and engineering all inherit the same gap, so one unflagged exception becomes everyone's cleanup problem, not just Deal Desk's.

The fix is not one more review step. It is someone who diagnoses whether the gap is an SFDC field mapping issue, an Ironclad template gap, or a rep habit, and drives the fix upstream so it stops recurring.

What I have already run, at smaller scale

At **PriceKeel**, I review every in-flight discount exception for non-standard terms before it reaches Legal, then built the audit trail that reconciles each approved exception against the contract it actually shipped.

At **Sensata**, I audited closed deals against a \$627M target, diagnosed root cause deal by deal, and recovered \$700K+ in margin in 2 quarters by fixing the pattern, not the one deal.

Both mean I have already sat on the diagnosis side of a reconciliation gap, not just the routing side of one.

A Deal Desk Analyst who reviews order forms, audits closed-won deals against Salesforce, and drives fixes upstream is describing this exact loop: catch it, diagnose it, fix the system underneath it.

What the Deal Desk Analyst opening asks for, and where the proof sits.

What the role covers

"Review in-flight order forms for non-standard terms and route exceptions before they hit Legal or provisioning."

"Audit closed-won deals for accuracy between Salesforce and contract data, and surface reconciliation gaps before they hit billing or provisioning."

"Diagnose root causes, whether that's a SFDC field mapping issue, an Ironclad template gap, or a rep behavior, and drive the fixes upstream."

"Design and maintain the runbooks, approval matrices, intake workflows, and deal-type documentation that let the team scale."

My Proof

Order form and exception review: reviews every in-flight discount exception for non-standard terms before it reaches Legal at PriceKeel, the same intake gate this seat runs for Apollo's order forms.

Salesforce-to-contract reconciliation: built the audit trail that reconciles each approved exception against the contract it shipped, plus audited 1,200 closed deals against a \$627M target at Sensata.

Root-cause diagnosis: traced Sensata's margin gaps to pricing errors, distributor terms, or rep behavior and fixed the pattern upstream, recovering \$700K+ in 2 quarters.

Runbooks and approval matrices: documented Sensata's new discount logic so Finance could audit it on sight, and built PriceKeel's own deal-approval workflow and intake criteria from scratch.

Bleeders and Leakers: the root-cause discipline behind a \$700K margin recovery.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with every gap traced back to its cause, a pricing error, a distributor term, or a rep pattern, before leadership prioritized which ones to fix.

At PriceKeel that same instinct became the system itself: I review the exception, reconcile it against the contract, and document the fix, so the deal and the ledger tell the same story.

What the first month on Apollo's Deal Desk looks like.

WEEK 1

Learn the order-form flow and CPQ

Sit with Deal Desk, Legal, RevOps and Sales to walk the current order-form review, exception taxonomy, intake criteria and approval matrix end to end.

Why first: the same instinct that had me learn PriceKeel's own deal flow before building anything on top of it.

WEEK 2-3

Own a review-and-reconciliation cycle

Take ownership of in-flight order form review and post-close reconciliation for a live cohort of deals, flagging Salesforce-to-contract gaps and diagnosing whether the cause is a field mapping issue, a template gap, or a rep pattern.

Why now: the same root-cause discipline behind the Bleeders and Leakers recovery.

WEEK 4

Turn one pain point into structured input

Identify one recurring manual step in the intake or reconciliation cycle, document it into the runbook, and translate it into structured input for engineering and RevOps.

Why this fast: a self-serve, escalation-by-exception system is only credible once someone has run the exception path by hand first.

CLOSE

You are hiring someone to catch the reconciliation gap and fix what caused it. I have already run that loop, at \$700K+ scale.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters** by diagnosing root cause deal by deal, distributor margins lifted **from 53% to 61%**, and a Power BI system that audited 1,200 opportunities against a **\$627M target**, all run cross-functionally with Sales, Finance and senior executives.

What is harder to find is someone who has also built the order-form and approval-matrix system from the other side of the desk. **I built that at PriceKeel**, so the intake-to-reconciliation discipline this role owns is not something I would need to learn on the job.
