Hiring Team, Apollo.io

Your posting describes a specific failure mode: a reconciliation gap between Salesforce and contract data that nobody catches until it hits billing or provisioning, and the fix being a diagnosis, not just a correction, whether it's an SFDC field mapping issue, an Ironclad template gap, or a rep habit. I ran that exact loop at Sensata leading the Bleeders and Leakers program: audited closed deals against a \$627M target, traced every gap back to its root cause, and recovered \$700K plus in margin in two quarters by fixing the pattern instead of the one deal.

I have since built the order-form side of that same gate myself. PriceKeel, the company I founded, reviews every in-flight discount exception for non-standard terms before it reaches Legal, the review your posting describes as the day-to-day deal support that raises the floor. I set up and run its CRM, CPQ configuration, deal approvals and intake workflow, then built the audit trail that reconciles each approved exception against the contract it actually shipped, so I know what "clean data" has to look like from both the analyst's seat and the system's.

The operating-system half of this role is not new to me either. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, tracking 1,200 pricing opportunities across 3 regions and 20 product lines, surfacing \$433M in margin gaps so leadership could prioritize by salesperson instead of guessing. Raising distributor and channel-partner margins from 53% to 61% in the same program came from documenting the new discount logic clearly enough that Finance could audit it on sight, the same runbook-and-approval-matrix discipline a Deal Desk operating system needs to scale past one person.

Right now, as Strategic Marketing III at Applied Materials, I automate repetitive pricing and forecasting analysis with Claude AI agents, the same instinct behind translating a manual workaround into structured input for engineering. I'd bring someone who has already diagnosed a reconciliation gap from the pricing side of the desk, not someone learning what "non-standard terms" means on the job. Proof trail at adhi-pricing-ai.vercel.app/ref/apollo-io.
