Hiring Team, MedhaviOne

Most people applying to build a business from zero inside MedhaviOne are pitching what they would do. I am already doing it: I am the Founder and CEO of PriceKeel, a decision-integrity layer for B2B SaaS deal pricing that I designed, built and am now running pilots on while raising the company's first round. The posting asks for someone with a minimum commitment to 2-3 years of hands-on building. I have been in that mode since I founded PriceKeel, and I like it more than any job I have had.

The build itself is the proof. I wrote the guardrail engine that reads a live discount exception and recommends a defensible call, then built the audit trail that gives Finance evidence to approve it. I set up the CRM, CPQ, forecast and pipeline reviews myself because nobody else was going to. Selling into RevOps, Sales leadership and Finance teams is B2B sales and marketing work in practice, which maps directly onto the Enterprise Growth mandate MedhaviOne is standing up for employer services.

This is not my first zero-to-one. In 2023 I shipped SwipeHire, an AI job-matching platform, writing the PRD, scoping the MVP and hiring the team that got it to 50 plus early users, the same zero-to-one platform mechanics a New Learning Brand needs before its first cohort signs up. In between the two builds I have carried P&L management at Applied Materials, Sensata and Pixis, and turned a stalled Sensata margin line into \$700K plus recovered in two quarters, so the operating discipline behind a build is not new to me either.

If I had to bet, Enterprise Growth is the tighter fit given where PriceKeel already sells, but I would want to hear how the Founders are weighing both mandates before assuming that. The proof trail sits at adhithyabhaskar.vercel.app/ref/medhaviOne if you want the details before we talk, and I am happy to walk through either track whenever works for the team.
