

PITCH DECK | MEDHAVIONE ENTREPRENEUR IN RESIDENCE

You need someone who can build a business from zero inside MedhaviOne and hold it for the long build. I am running that exact motion at PriceKeel right now, and I have done it once before at SwipeHire.

A founder currently in the build, not a candidate describing one, applying for either the Enterprise Growth or New Learning Brand mandate.

Founder & CEO of PriceKeel, in pilots and raising its first round

SwipeHire built zero-to-one to 50+ early users

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

53% to 61% distributor margin lift, repricing logic that held

8-person team hired and run across 8 client P&Ls at Pixis

An Entrepreneur in Residence seat asks for two things most product hires never have to prove: **start something from nothing, and stay in the build for years, not sprints.**

What the seat actually demands

Building a business from zero inside an existing company means there is no backlog to inherit, no revenue model already agreed, and no team until the EIR builds one, whether the mandate lands on Enterprise Growth or New Learning Brand.

The written case for each idea has to hold up in front of the Founders directly, which is a different bar than a normal product update.

Both mandates need the same thing underneath: P&L management, hands-on building for the full 2-3 year run, and a written case strong enough to carry conviction without a safety net.

What I am already running, on exactly that shape of problem

At **PriceKeel**, I am building a company from zero right now: designed the guardrail engine and audit trail, set up the CRM, CPQ and deal-approval process from scratch, and I am running pilots while raising the company's first round.

At **SwipeHire**, I wrote the PRD, scoped the MVP and hired the team that shipped an AI job-matching platform to 50+ early users, the same zero-to-one platform mechanics a New Learning Brand needs before its first cohort signs up.

Both required the same discipline: a written plan good enough to move people, a team built around it, and P&L ownership carried the whole way through.

A founder who is currently building a company and who has already shipped one product from a blank page is not two different profiles. It is one operating pattern, and it matches either mandate MedhaviOne is standing up.

What the EIR posting asks for, and where the proof sits.

What the role covers

"Build new businesses from zero inside MedhaviOne. Each EIR reports to the Founders and owns one mandate end to end."

"A minimum commitment to 2-3 years of hands-on building," plus a demonstrated project built from scratch and strong written communication.

Good to have: B2B SaaS/AI growth or EdTech experience, and P&L management.

My Proof

PriceKeel, founded and run today: a B2B SaaS company built from inception, with its own guardrail engine, audit trail, CRM, CPQ and deal-approval process, selling to RevOps, Sales leadership and Finance.

SwipeHire: an AI job-matching platform shipped zero-to-one, PRD through MVP through 50+ early users, the closest analog to standing up a new marketplace brand.

P&L management, carried three times over: Applied Materials today, Sensata's Industrial BU, and an 8-client, 8-person portfolio at Pixis.

Written communication: Sensata leadership decks, PriceKeel investor materials, and a Safran market-entry report presented directly to that company's leadership.

Zero to a running company: the guardrail engine, the audit trail, and the go-to-market built around both.

PriceKeel reads a live discount exception inside a company's deal platform and recommends an explainable guardrail learned from that company's own closed-won and closed-lost deals, then records the human pricing decision with evidence Finance can audit.

3

Stakeholder Groups Sold To

RevOps, Sales leadership and Finance each need a different proof point before a deal-pricing tool earns trust; the product has to speak to all three.

0 to 1

CRM, CPQ and Deal Approvals Built

None of the operating infrastructure existed before this year: it was set up from scratch alongside the product itself.

2

Live Tracks: Pilots and Fundraising

Running customer pilots and raising the first round at the same time, the exact double mandate an EIR seat runs on day one.

This is the same pattern I ran at Sensata's Bleeders and Leakers program, where I built a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target and negotiated \$700K plus of that back into margin in two quarters. Find the build that matters, put the process around it, then prove the fix holds.

What the first month as MedhaviOne's Entrepreneur in Residence looks like.

WEEK 1

Get the mandate and the numbers straight

Sit with the Founders to lock the assigned mandate, whichever one it is, and pull together the market sizing and early customer signal already sitting inside MedhaviOne for it.

Why first: the same first move that shaped PriceKeel's guardrail engine, ground the plan in real numbers before writing a word of strategy.

WEEK 2-3

Write the plan, build the first version

Turn the mandate into a written plan the Founders can act on, then start building: the first GTM motion for Enterprise Growth, or the first marketplace listings and pricing tiers for New Learning Brand.

Why now: the same sequence that got SwipeHire from a PRD to 50+ users, write it down, then ship the smallest version that tests it.

WEEK 4

Ship, instrument, and report

Launch the first version to real customers, put an OKR cadence and a reporting rhythm in place, and bring the Founders a written update on what the numbers say to build next.

Why this fast: a mandate is only really owned once it can report its own numbers back, not once someone else has to ask for them.

CLOSE

You are hiring someone to build a business from zero and stay with it for years. I am already doing exactly that, twice over.

The current build is **PriceKeel**: a B2B SaaS company built from inception, with its own guardrail engine, audit trail and deal-approval process, now in pilots while I raise the company's first round.

The earlier build is **SwipeHire**, an AI job-matching platform shipped zero-to-one to 50+ early users, plus **\$700K+ recovered in 2 quarters** and distributor margins lifted **from 53% to 61%** at Sensata. I carry P&L management today at Applied Materials the same way this role will carry it across Enterprise Growth or New Learning Brand.
