Hiring Team, Rippling

Distributor and channel-partner margins at Sensata were stuck at 53% when I took over the repricing work. Two quarters later they sat at 61%, because I treated each distributor like a marketing audience with its own economics, not a flat discount line. That is the same instinct a Broker channel needs: the terms and the message have to work together, or the channel stops trusting either one.

I have spent the last few years building the pieces your req asks for separately, then combining them. At Sensata I built the co-branded decks and case studies that got 50+ reps to actually use them, lifting win rates 30 percent, while running the email and paid launch campaigns behind a new sensing product line to 35 percent more qualified leads. At Plug Power I owned \$100K a month in paid budgets, cut CPA 25 percent across Google, Microsoft, Meta and LinkedIn, and automated the WordPress-to-Pardot lead flow so an always-on nurture program kept running without someone manually pushing leads through. None of that was one campaign; it was a repeatable motion I could hand off.

The part of this role I'd enjoy most is the one that looks hardest on paper: 8 distinct audiences, one GTM engine. I ran exactly that shape at Pixis, managing 8 clients at once with budgets from \$15K to \$90K a month, each on its own channel mix, and used Amplitude and Tableau to find which campaigns were actually underperforming instead of guessing, lifting campaign ROAS 40 percent across the portfolio. I also build Claude-based agents at Applied Materials to keep campaign reporting fast as the number of things I'm tracking grows, which is the same problem a Broker program hits once it scales past a handful of campaign themes.

I'd welcome the chance to talk through how I'd approach the first quarter of broker nurture and sales-support content at Rippling. Proof trail at adhi-growth-ai.vercel.app/ref/rippling.
