Hiring Team, Fin

Your posting lists forecasting, pipeline reporting, quota models, territory planning and compensation reporting as one job, owned by one person who can move between the detail and the executive recommendation. That is the exact shape of the system I built at Sensata: the Bleeders and Leakers program, 1,200 pipeline opportunities scored against a $627M target across 3 regions and 20 product lines, with win rate, average deal size and stage distribution tracked by salesperson so leadership could see funnel health and capacity by rep, not just by region.

That dashboard is also where the governance work sits. I surfaced $433M in margin gaps for leadership to prioritize and then recovered $700K+ in margin in two quarters acting on it myself, raising distributor and channel-partner margins from 53% to 61% along the way. None of that holds up without the same thing your posting asks for: consistent definitions, documented approvals, and a data model Finance trusts. I built the CRM, CPQ and forecast-review process that enforces that trust as founder of PriceKeel, including the audit trail that lets Finance review every pricing decision after the fact.

The AI-fluency line in your posting is already how I work day to day. As Strategic Marketing III at Applied Materials I run Claude agents against repetitive forecasting and pricing analysis, the agent takes the first pass and I make the call and tighten the rule, which is the exact pattern your posting describes for reducing manual work without adding headcount. I have also sat on the rep-facing side of this: building sales enablement and KPI frameworks that lifted win rates 30% and qualified leads 35% at Sensata, so I know what a sales org actually does with the reporting an ops seat hands it.

Fin is scaling the GTM engine behind an AI product moving faster than most; I would want the operating cadence behind it to move just as cleanly. Proof trail at adhithyabhaskar.vercel.app/ref/fin.
