PITCH DECK | FIN SENIOR SALES OPERATIONS MANAGER

A GTM engine scaling as fast as Fin's AI product needs operating rhythms that scale without multiplying headcount. I have already built those rhythms once from zero, and run the margin discipline behind them at a much larger scale.

Forecasting and pipeline reporting, capacity and segmentation analysis, CRM and BI systems, and an AI agent that takes the first pass so the human call is the one that matters.

- **$627M** pipeline, 1,200 opportunities, scored by win rate, stage and salesperson
- **PriceKeel**: CRM, CPQ, forecast and pipeline reviews, deal approvals, built from scratch
- **$700K+** in margin recovered in 2 quarters acting on that pipeline data
- **+30% win rate, +35% leads** from sales enablement and KPI systems built for 50+ reps
- **Claude AI agents** running first-pass forecasting analysis today at Applied Materials

WHY THIS DECK EXISTS

Owning sales operations end to end is not a reporting job. It is a design job: get the data model and the operating cadence wrong and the system becomes the bottleneck it was built to remove.

What a scaling GTM engine runs into

Forecasting, pipeline, territory and quota data live in different systems, so one source of truth has to be built before leadership can trust any dashboard.

Without consistent metric definitions and governance, every business review becomes a debate about whose number is right instead of what to do next.

Manual reporting does not scale with headcount flat, so the operating cadence has to be designed to run itself as the sales org grows.

What I have already built and run

At **Sensata**, I built the Bleeders and Leakers system: 1,200 opportunities scored against a $627M target by win rate, stage and salesperson, the funnel-health and capacity view this role is asking to build.

At **PriceKeel**, I run the CRM, CPQ, forecast and pipeline reviews, and the approval governance myself, end to end, for a live platform.

At **Applied Materials** now, AI agents built on Claude take the first pass on repetitive forecasting work so my call is the one that moves the number, the exact loop this seat needs.

This req asks for forecasting, pipeline reporting, territory and quota planning, compensation reporting, scalable systems across CRM and BI, data governance with Business Systems and Data Engineering, and AI used to cut manual work without adding headcount. That is the Bleeders and Leakers system, run again for Fin.

THE REQ, MAPPED

What the Senior Sales Operations Manager opening asks for, and where the proof sits.

What the role covers

> *"Own forecasting processes, pipeline reporting, quota models, attainment tracking, and performance insights."*

> *"Lead territory planning, segmentation, coverage, and capacity analysis to support efficient allocation of sales resources."*

> *"Use AI tools and automation thoughtfully to reduce manual work and increase the speed and quality of sales execution."*

My Proof

Bleeders and Leakers at Sensata: 1,200 opportunities scored against a $627M target with win rate, avg $/win and stage distribution by salesperson and product line, the forecasting and attainment view this req asks the seat to own.

Safran segmentation project: narrowed TAM/SAM/SOM from 170 facilities to a SAM of 28 across 4 verticals, the coverage and capacity-allocation analysis a territory plan runs on.

Claude AI agents at Applied Materials: first-pass automation on repetitive forecasting and pricing analysis today, the same reduce-manual-work pattern this req names directly.

CRM and CPQ ownership at PriceKeel: set up and run end to end, including the audit trail and governance documentation Finance and Business Systems can review.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: funnel health, capacity and attainment visibility across a $627M book.

Built as a BU-wide Power BI system covering 1,200 pipeline opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, scored by win rate, avg $/win and stage distribution by salesperson and product line, the same capacity and productivity view this req asks the seat to build and maintain.

$433M

Margin Gaps Surfaced

Ranked every pricing and discount risk into one view instead of chasing anecdotes deal by deal.

$700K+

Margin Recovered in 2 Quarters

Closed by acting on the dashboard's own attainment and discount-band signals.

53% to 61%

Distributor Margin Lift

A channel-partner repricing program run off the same capacity and segmentation data.

The same seat built sales enablement and KPI frameworks that lifted rep win rates 30% and qualified leads 35%, the rep-facing half of a system most Sales Ops seats only build from the reporting side.

FIRST 30 DAYS

What the first month inside Fin's Sales Operations seat looks like.

WEEK 1

Map the forecasting and pipeline data model

Sit with Sales, Finance and Business Systems to build one view of pipeline, quota attainment and win rate by segment, the same first move behind the Bleeders and Leakers dashboard at Sensata.

Why first: territory and compensation decisions are only as good as the data model behind them.

WEEK 2-3

Ship the capacity and territory view

Draft the territory, segmentation and coverage analysis against real pipeline data, and start the governance and documentation layer for the metrics it depends on.

Why now: building the plan against real deal data, not in a vacuum, is what made the Sensata margin gains hold.

WEEK 4

Stand up the AI first-pass and the CRM/BI build-out

Put an AI agent on first-pass reporting and data-quality checks so manual work drops, and begin building the dashboards into Salesforce and BI so leaders self-serve the answer.

Why this fast: the same habit that keeps Claude agents running recurring forecasting analysis at Applied Materials today.

CLOSE

You are hiring someone to own forecasting, pipeline, territory and compensation reporting for a GTM engine that cannot scale headcount linearly. I have built that exact system once already, and run the margin discipline behind it at a much larger scale.

The core proof is Sensata: a **$627M-opportunity Power BI pipeline** scored by win rate, stage and salesperson, and **$700K+ in margin recovered in 2 quarters** acting on what it surfaced.

What is harder to find is someone who also runs the systems side: at **PriceKeel** I own the CRM, CPQ and forecast-review process end to end, and at **Applied Materials** I run Claude AI agents on the first pass of repetitive forecasting work every day, the exact pairing this req asks for.
