PITCH DECK | ASSEMBLYAI PRODUCT MARKETING MANAGER

AssemblyAI ships a new model, product or capability every quarter, and each one needs a story, a launch, and the enablement to sell it the same week. I already run that loop end to end.

Product launches, positioning, sales enablement and competitive intelligence from a PMM who already automates the work with Claude.

- **$2M+** first-year revenue, Sensata new-product GTM launch
- **+30%** rep win rate from a sales-enablement library 50+ reps used
- **+15%** conversion from positioning that turned specs into buyer outcomes
- **Claude agents** already automate my market and competitive analysis
- **SwipeHire** - shipped an AI product zero-to-one, copy to launch, myself

WHY THIS DECK EXISTS

The hard part of this seat is not writing one good launch. It is running a launch, enablement update and competitive response every few weeks without the story getting thin.

What a quarterly shipping cadence runs into

New models and capabilities land fast enough that a launch plan written for the last release is already stale by the next one, so the playbook has to be reusable, not bespoke each time.

Buyers split across developers building voice agents, clinical teams running medical scribes, and enterprises buying customer-call intelligence, so one positioning line rarely covers all three without getting vague.

A small, flat marketing team means the PMM writes the copy and ships the page, not just the brief, or the launch slips while someone else gets to it.

What I have already run, at smaller scale

At **Sensata**, I owned a full-funnel new-product GTM launch end to end, positioning, channel and launch sequencing, landing $2M+ in first-year revenue on a hard quarterly deadline.

I built a **sales-enablement library**, battlecards, case studies, objection handling, that 50+ reps actually used, not a deck that sat in a shared drive; win rates rose 30%.

I automate the recurring analysis behind every launch and pricing call with **AI agents built on Claude** at Applied Materials, the exact AI-native workflow this req names by name.

A Product Marketing Manager who runs launches end to end, owns positioning across developer and enterprise buyers, builds enablement sales actually uses, and ships it all hands-on with modern AI tools, is describing a loop I have already run twice and automate today.

THE REQ, MAPPED

What the Product Marketing Manager posting asks for, and where the proof sits.

What the role covers

> *"Run product and model launches end-to-end using our launch playbook...own the launch plan: timeline, tiering, stakeholder alignment, asset production."*

> *"Translate technical capabilities (accuracy, latency, model improvements) into positioning that ties to business outcomes for developers and enterprise buyers."*

> *"A hands-on builder: comfortable shipping website edits, landing pages, and emails yourself with modern AI tools...rather than only briefing others."*

My Proof

End-to-end launch ownership: owned GTM for new sensing products across North America and Europe, positioning, channel, launch sequencing, driving $2M+ first-year revenue.

Translating technical capability into positioning: turned sensor accuracy and integration specs into buyer-outcome language that lifted conversion 15% on priority launches.

Hands-on builder with AI tools: automate market and competitive analysis with AI agents built on Claude at Applied Materials; shipped SwipeHire's landing page and copy myself, zero-to-one.

Sales enablement and competitive intelligence: built the enablement library for 50+ reps (+30% win rate) and tracked competitor moves across EMEA and the US, turning shifts into messaging responses.

THE SENSATA PROOF, IN DEPTH

One launch, three functions, a hard revenue number: the same shape as a quarterly model release.

The new-sensing-product launch needed positioning, channel strategy and a sales motion ready on the same day the product shipped, across North America and Europe, not a staggered rollout.

$2M+

First-Year Revenue

The number the launch plan was built to hit: positioning, channel and launch sequencing owned from kickoff to the sales floor.

+15%

Conversion Lift

From positioning that translated accuracy and integration specs into language a buyer, not an engineer, actually acts on.

+30%

Rep Win Rate

From an enablement library 50+ reps used in the field, built from what reps said was actually missing, not a guess.

The same launch ran 30+ customer interviews with OEMs and distributors before the positioning was final, raising CSAT 22%, and the competitive-intelligence work that followed, tracked across EMEA and the US, fed straight back into messaging. The common thread: every claim in the launch deck traced to a real conversation, which is the same bar a voice-AI launch needs to clear with developers who will check the benchmark themselves.

FIRST 30 DAYS

What the first month on AssemblyAI's PMM desk looks like.

WEEK 1

Learn the launch playbook and the buyers

Sit with product, research and sales to map the next model or capability shipping this quarter, and talk to reps about what is landing and what is missing from the current enablement set across voice agents, scribes and call intelligence.

Why first: the same move that started every Sensata launch: find out what the field actually needs before writing a word of copy.

WEEK 2-3

Ship the next launch asset, hands-on

Write the positioning, build the landing page and launch email, and ship them with AI tools rather than only briefing someone else, then align on the success metrics with product and marketing leads before it goes live.

Why now: the pattern that lifted conversion 15% at Sensata: positioning built from real buyer language, shipped by the same person who wrote it.

WEEK 4

Turn it into a repeatable launch tier

Fold the asset into the launch playbook: a battlecard, a one-pager, and a competitive-benchmark update Sales and research both sign off on, so the next model release moves faster than this one did.

Why this fast: a launch playbook only earns its name if it gets faster each time, the same discipline behind the 50+-rep enablement library.

CLOSE

You are hiring a generalist who runs the launch, writes the positioning, and ships it with modern AI tools. I already run that loop, and I automate my own version of it today.

The core proof is Sensata: a new-product GTM launch owned end to end that landed **$2M+ in first-year revenue**, positioning that lifted conversion **15%**, and a sales-enablement library that raised rep win rates **30%**, all run across North America and Europe on a quarterly deadline.

What is harder to find is someone who already runs the "modern AI tools, not just briefing others" part of this req today. **I automate market and competitive analysis with AI agents built on Claude** at Applied Materials, and I shipped SwipeHire's copy, landing page and launch myself, so the hands-on, AI-native workflow this role names is not something I would need to develop on the job.
