Hiring Team, AssemblyAI

Your posting says the person in this seat writes the copy, builds the deck, ships the landing page, and runs the launch themselves, using modern AI tools rather than only briefing others. That is already how I operate: at Applied Materials I automate the recurring market and competitive analysis behind every pricing call with AI agents built on Claude, and before that, at Sensata, I owned a new-product GTM launch end to end, positioning, channel and launch sequencing, that landed $2M+ in first-year revenue. That is the shape of this role, not a skill I would need to grow into.

Positioning is the other half of this req, and I have run it twice. At Sensata I translated technical sensor specs into buyer-outcome language that lifted conversion 15% on priority launches, then built the sales-enablement library, battlecards, case studies and objection handling, that 50+ reps actually used in the field; win rates rose 30%. I also tracked competitor moves and benchmarks across EMEA and the US and turned the shifts into messaging responses, the same loop your posting describes for keeping battlecards and comparison pages current and defensible.

Sourcing customer proof is a process I already run: 30+ structured interviews with OEMs and distributors at Sensata fed straight back into positioning and raised CSAT 22%. I would point that same process at AssemblyAI's voice-agent, medical-scribe and customer-call-intelligence buyers, the ones who can say exactly why they picked streaming over a competitor's batch model.

Outside of my day job I built SwipeHire zero-to-one: wrote the PRD, shipped the landing page and auto-tailored resumes on the OpenAI API, and ran the GTM and analytics myself. I like teams that ship every quarter and expect the person owning the launch to also own the keyboard, which is exactly the generalist seat you are describing.
