Hiring Team, Cisco

Your AI Delivery Research posting asks for someone who can research market trends and competitor strategy to find automation opportunities, and that is work I already run. At Sensata, I built and ran competitor and customer analysis across EMEA and the US, turning purchasing patterns and competitor market share into revenue opportunities the business acted on. That is the same outside-in motion your team wants pointed at Cisco IQ's delivery workflows, just aimed at a different portfolio.

The posting is also explicit about wanting someone fluent with AI tools for capturing data and generating insight, not just talking about AI. At Applied Materials, I automate repetitive research and analysis work with AI agents built on Claude, freeing up time for the actual judgment calls in market sizing and forecasting instead of the recurring number-crunching. I partner daily with Sales, Engineering and Accounts there to turn field and technical input into one forecasting view, which is the same bridge your role asks a researcher to hold between technical product managers and engineering peers.

Where I can add the most value fastest is in packaging findings so they are usable, not just accurate. I built sales enablement, decks and case studies, for 50+ reps at Sensata that improved win rates 30%, and I regularly turn competitive and market research into the leadership decks and quarterly reviews that drive roadmap calls at Applied Materials now. Translating research into a brief someone can act on in the next planning cycle is a habit, not a one-off deliverable.

What I bring beyond the resume is the systems side of that same instinct. I built the FY2026 Bleeders and Leakers Power BI dashboard that tracked 1,200 pricing opportunities against a $627 million target across 3 regions, 4 product families and 20 product lines, and used it to surface $433 million in margin gaps for leadership to prioritize. That is the same discipline a capability matrix or a competitive brief needs: a structure that holds up when someone else has to act on it later, not just when I am the one presenting it.
