Hiring Team, Traba

Your posting says the product is the labor itself, the workers matched into warehouses and manufacturing lines, and that is the exact shape of problem I shipped zero-to-one at SwipeHire: a two-sided job-matching marketplace where I balanced job-seeker supply against employer demand, wrote the PRD, scoped the MVP, and ran 8+ A/B tests and 12+ interviews that lifted activation 25% across 50+ early users. I did not inherit that marketplace, I built the matching logic, the pricing tiers, and the GTM for it myself.

The enterprise half of your role, multi-stakeholder customers with long sales cycles and real operational rollout, is where I have spent most of my working hours. At Sensata I owned the product roadmap and a 100+-feature backlog for sensor solutions across automotive and industrial manufacturing environments, ran 30+ interviews with OEMs and distributors to find what they actually needed, and shipped against it in Agile with engineering across 3 regions, cutting time-to-market 20%. Translating what a facility floor needs into a prioritized backlog is the job I already do.

I also build the internal tooling that makes those decisions stick. As Pricing Lead at Sensata I shipped a Power BI system tracking 1,200 pricing opportunities against a \$627M target across 20 product lines, the kind of operational system builders and ops teams run on daily, not a one-off deck. At Plug Power I was the one who automated the WordPress-to-Pardot lead flow myself, hands on the tooling, cutting cost per lead 50%. That is the builder mentality your post asks for: systems that keep working after the meeting ends.

I am currently Strategic Marketing III at Applied Materials, where I run AI agents built on Claude to automate analysis I used to do by hand, which is closer to what your posting means by AI-native operator than most resumes claiming it. I would like to bring that combination, marketplace builder, enterprise systems thinker, AI-first operator, to the staffing product at the center of Traba. Proof trail at adhi-product.vercel.app/ref/traba.
