Hiring Team, Strella

At Sensata, I built the go-to-market for a brand-new sensing-product line from the ground up: packaged it into offerings by audience and use case, wrote the positioning, and took it through launch to $2M+ in first-year revenue and 35% more qualified leads. That is close to the motion behind Strella's PMM seat, except the product category here is newer and the buyer (insights and market research teams) is less used to being sold an AI-moderated platform than an OEM is used to being sold a sensor.

Positioning only holds up once sales can repeat it on a call, so I built the proof behind it too: decks, case studies, and the competitive read that backed them, for 50+ reps, which lifted win rates 30%. I ran that competitive analysis myself across EMEA and the US rather than handing it off, because a stale competitive line shows up in the first objection a prospect raises. Strella is defining a new category, so the "why us, why now" argument has to be built fresh, not borrowed from an adjacent market, and that is the part of this work I enjoy most.

The posting's bonus line, marketing to insights or market research buyers, maps directly to the 30+ customer interviews I ran with OEMs and distributors before committing Sensata to a positioning bet, and to the customer research I ran at Plug Power that cut CPA 15% by testing the funnel directly instead of guessing at it. My honest read on the angle at Strella: most research buyers have been burned by panel bias and slow moderators for years, so the packaging should sell the integrity of the AI moderation as hard as it sells the speed, because speed alone invites the same skepticism a cheap panel already earned.

I'd like to talk through how I would package Strella's platform and research services as two offerings with distinct outcomes and sell both off one shared proof story. More of this work is at adhi-product-ai.vercel.app/ref/strella.
