Hiring Team, DoorDash

At GenY Medium I rebuilt Google Merchant Center and Meta catalog feeds for D2C brands and turned a stale product catalog into 16x ROAS. At Pixis I ran the retail media side of that same funnel, Amazon Ads and Criteo, while managing shopping-feed cleanup for a fashion client that moved 3x ROAS in a single month. That is the same loop this role runs on New Verticals Retail: fix the catalog and assortment first, then let the site experience and the paid placement around it actually convert.

The data side of merchandising is just as familiar. At Sensata I built a Power BI dashboard that tracked 1,200 pricing opportunities against seasonal and regional trends, and ran SQL and GA4 KPI frameworks across 50K+ connected devices to catch demand signals before they showed up in the sales numbers. I know what it takes to turn raw sales, search and seasonality data into a merchandising call someone can act on this week, not a report that lands after the window closed.

I also already run the AI-tool side of the job. At Applied Materials I built AI agents on Claude to automate the repetitive parts of market and pricing analysis, freeing up the hours for the judgment calls a merchandising strategist actually needs to make. I built a product (SwipeHire) end to end on the same kind of tooling, so the "use Claude, Cursor and Gemini to automate the workflow" line in this req is not new ground, it is how I already work.
