Hiring Team, Button

Button is the rare B2B SaaS where the Growth Lead can use the company's own deterministic-attribution stack on the company's own funnel. Closed loop on closed loop. Most growth teams spend the first six months arguing about whether the data they are looking at is real; at Button, the entire product thesis is that the data is real. The interesting question is not how to measure, it is what to do with measurement that actually clears.

I have spent four years inside the same category from two different sides. At Pixis, I ran an 8-client B2B SaaS portfolio on a \$1.4M budget across global D2C and e-commerce partners on the same AI-marketing-platform side of the table Button operates from. Held vendors and clients to delivery and lead-quality standards in writing. Replaced two channels mid-quarter when KPIs slipped. Trained eight enterprise marketers on AI bidding and creative tools, which is the same translation muscle Button needs for its retailer and publisher partners. Churn dropped 50%. Pixis is the closest analog to Button in any growth-lead candidate's CV.

At Plug Power I rebuilt the buyer side of the same conversation. Closed-loop attribution from ad click to SQL on Salesforce, Adobe Analytics, GA4, and GTM. UTM spec from scratch, GTM containers rebuilt, lead routing validated through Salesforce campaign attribution. CPA dropped 25%, conversion went up 20%. The mental model behind that work is the deterministic, first-party attribution paradigm Button productized. I have lived on the buyer side of the conversation Button is having with its customers, which means I can price, sell, and explain the product to those buyers in their language.

SwipeHire is the AI-product proof. I built it solo on Python, OpenAI API, and React. Defined ICP, instrumented GA4 plus GTM event tracking from day one, ran eight A/B tests on activation flows, weekly retention cohort analysis. 50+ users, +25% activation. Few growth-lead candidates have shipped an AI product end-to-end, and even fewer have done it on the same instrumentation discipline a Smart-Routing platform requires.

On consumer paid breadth, GenY delivered 16x ROAS via Google Merchant Center and Meta catalog rebuild. Cross-regional GTM at Sensata drove \$2M+ first-year revenue across NA and EU.

NYC works. Open to a hybrid conversation. Happy to walk through any of the above in more detail.
