Hiring Team, Cisco CX Marketing (Marketing Manager, Req 2011056-1)

Customer advocacy is really a translation problem, not a storytelling problem. The hard part isn't writing the case study. It's getting an enterprise buyer who has signed an NDA, has internal politics around what they can publicly say, and has a technical story their own marketing team has never quite captured, to give you a narrative that's true to their experience, publishable on a Cisco stage, and specific enough to actually convince a peer prospect. Most advocacy programs fail at that translation layer. The good ones build for it from the start.

That's the part of this role I want to work on, and it lines up with what I've actually done.

At Sensata I ran 30+ interviews with OEMs and distributors across NA and EU. The product was industrial sensors, and the buyers were engineering and procurement teams who default to skepticism toward marketing. I figured out which 12 accounts had a story worth telling. I co-built case studies, decks, and battlecards with those champions, in their language, signed off by their compliance teams. 50+ Sensata reps used the assets. Partner win rates went up 30%. The work was less about writing and more about earning the right to publish.

Three things from your JD that line up directly:

Translating technical milestones into business narratives. At Sensata I built a SQL and GA4 measurement framework on 50K connected devices. Engineering shipped features. Nobody could tell business why those features mattered. I built the cohort analysis, then turned it into "what changed for customers" stories that landed in launch decks and exec presentations. Feature adoption went up 18%. The framework was useful. The narrative was what got it adopted across launch programs.

AI-augmented content production. This is the part most teams get wrong. They reach for AI to write more. The actual unlock is using AI to triage faster, surfacing which 5 of 100 customer interviews actually contain a publishable story, before you spend a week drafting any of them. I built SwipeHire this year using the OpenAI API end-to-end, so I know what AI tools can and can't do for editorial workflow. The bottleneck is judgment, not generation.

Multi-region program management. I ran a 100+ feature backlog in Agile across product, engineering, and 3 regional teams at Sensata for 18 months. User stories, acceptance criteria, dependency maps, release coordination. Cut TTM 20%. Global advocacy programs run on the same muscle. The Awards program coordination, nominations, evaluation, logistics is recognizable territory.

One honest note: I haven't run an enterprise customer Awards program at Cisco's scale. The closest analog is Sensata partner enablement at 50+ reps and Pixis client portfolio at \$1.4M. I'd ramp on the program-specific mechanics fast, but I want to be straight that this part is new.

Boston-based. Open to RTP relocation. BE in Mechanical Engineering (BITS Pilani), MS in Marketing Analytics (Simon, U. of Rochester).

Resume and portfolio: adhithyabhaskar.vercel.app/ref/cisco

Would love 15 to 20 minutes to hear what the team's biggest "story we couldn't get the customer to tell" looks like right now.
