Hiring Team, EvolutionIQ

I'll skip the part where I tell you I'm passionate about product marketing and get to the point.

The hardest thing about enabling a sales team on a complex product isn't writing the battlecard. It's getting the rep to actually use it. At Sensata, I learned this the hard way - I built the first version of our sales enablement library and watched it collect dust. So I sat in on sales calls, listened to how reps actually talked about the product, rewrote everything in their language, and added objection handling based on real deals we'd lost. Usage went up. Win rates went up 30%. The content worked because it sounded like something a seller would say, not something a marketer would write.

That's the muscle your JD is hiring for: someone who can take a sophisticated AI product and turn it into a narrative a sales team can deliver on a call without checking their notes. I've done it for industrial IoT sensors - products that are genuinely hard to explain - and I've done it across 50+ reps in 3 regions with different buyer personas and competitive landscapes.

Two other things worth knowing:

I built an AI product myself - and I'm certified in the tools. I hold four Anthropic Claude certifications (101, Code 101, Cowork, Building with Claude API). SwipeHire started as a side project and became a real SaaS product with 50+ users. I wrote the positioning, tested it, rewrote it, tested it again - 8 rounds of A/B testing on messaging alone. That experience changed how I approach PMM: I don't just translate what Product tells me. I pressure-test it against what users actually respond to.

I'm comfortable in the room. At Pixis, I joined strategic client calls as the person who could explain what the AI platform did and why it mattered in dollar terms. Clients renewed because the narrative held up under scrutiny, not because the deck was pretty. That's the same "product and narrative expert on sales calls" role your JD describes.

EvolutionIQ is solving a real problem in claims management with AI, and the GTM challenge - making that legible to enterprise buyers who've been burned by AI promises before - is exactly the kind of positioning problem I want to work on.

I'd welcome a conversation.
