Hiring Team, FedEx

Enterprise GEO breaks at one specific seam: the gap between the technical SEO team that owns site health and the content team that owns the FAQ structure AI Overviews actually cite. Most enterprises ship one without the other. The technical work surfaces beautifully in Botify but never makes it into a Perplexity answer; the content work answers user intent but ships without the schema markup that lets a Knowledge Graph entity resolve. The teams that win the AI-search surface are the ones that have closed the loop: schema-first content patterns, FAQ blocks built for citation, and a measurement frame that separates AI-referred traffic from blue-link organic.

I have built that loop. At Plug Power I owned the SEO + AEO + GEO program end-to-end. On-page and technical SEO sat alongside schema.org rebuilds and content-cluster mapping; FAQ pages were structured specifically for ChatGPT, Claude, and Perplexity citation. The brand vs non-brand measurement frame got reset to separate AI-referred traffic from traditional organic, and the lift fed back into Salesforce campaign attribution so the program tied to revenue, not vanity rank.

The same methodology travels. I authored a 2-page enterprise AI-Search audit teardown for KKR: AI Overview presence audit, citation gap analysis, schema-first remediation plan, content-cluster mapping. Available as a portfolio sample. It is the methodology the JD asks for, on a portfolio of comparable enterprise complexity.

On the multi-location side, Sensata GTM runs across NA, EU, and 3 regions. hreflang, duplication control, and localized messaging informed by 30+ structured customer interviews. The international SEO frameworks the JD calls for are not theoretical for me; they are the operating model I run today.

On AI-driven search readiness specifically: 4 Anthropic Claude certifications come from running prompt-based iteration as my actual workflow, plus SwipeHire shipped solo on Python, OpenAI API, and React. Adobe LLM Optimizer and Conductor are week-one tool ramps on top of an AEO methodology I have already shipped.

On Python and SQL: direct fluency from Sensata KPI dashboarding (\$627M Power BI program, 50K+ connected devices) and the SwipeHire build. Brand vs non-brand and conversion-mix analysis are queries I have written, not concepts I have read about.

Plano works. Open to relocating from Boston for the right team. Resume attached, KKR audit teardown available on request.
