Hiring Team, Flyntlok

Equipment dealers are one of the most underserved buyers in vertical SaaS. The category sells like enterprise software but markets like a 1990s industrial trade publication, and the gap between those two is the demand-gen problem someone needs to solve at Flyntlok. I want to be that someone.

I have spent four years marketing into the same buyer-shape your customers serve. At Sensata I run GTM for industrial sensor product lines selling to OEMs, equipment manufacturers, and distributors across NA, EU, and three regions. \$2M+ first-year pipeline, +35% qualified leads, +8% market share. The buyer is the manufacturing engineer or operations lead who hates marketing speak and wants a spec sheet, until you give them an outcome story that maps to their P&L. I have written that translation 30+ times. Plus, my undergrad is a BE in Mechanical Engineering from BITS Pilani. The equipment-dealer vocabulary is native rather than a ramp.

On the demand-gen rebuild side, Plug Power is the early-growth-hire case study. I came in to a fragmented paid stack with no closed-loop attribution and rebuilt it. Paid search, paid social (Meta + LinkedIn), Adobe-driven programmatic display, retargeting funnels and suppression lists in Adobe Audience Manager, and a UTM spec written from scratch. GTM containers rebuilt, lead routing validated through Salesforce campaign attribution, click-to-SQL one number rather than three. CPA dropped 25%, conversion went up 20%. The more durable outcome was that the next growth hire inherited a system rather than a black box.

SEO, AEO, and GEO were part of that rebuild. I ran on-page and technical SEO, schema, and content-cluster maps designed to win both traditional SERPs and AI-engine citations on ChatGPT, Claude, and Perplexity. I did the same for B2B SaaS partners at Pixis and for a D2C consumer brand at GenY Medium that hit 16x ROAS once the catalog and category-page work was clean enough to be quoted by AI engines.

On the AI-assisted-execution side, I am exactly the candidate your JD describes. I shipped SwipeHire end-to-end on Python, OpenAI API, and React. Eight A/B tests on activation flows, weekly retention cohort analysis, +25% activation. Plus four Claude certifications (101, Code 101, Cowork, Building with Claude API) that come from running prompt-based iteration on creative, copy, and insight as my actual workflow. The "leverage AI tools (e.g., ChatGPT, Claude, Jasper) to accelerate content creation" line in your JD is verbatim how I work today.

The named tools I have not used directly are Webflow and SEMrush. SwipeHire's React custom CMS is functionally adjacent to Webflow, and Google Keyword Planner is the sister tool to SEMrush. Both are week-one ramps.

Waltham is 20 minutes from where I live. Happy to walk through any of the above in person.
