Hiring Team, GlossGenius

I'll be direct: I saw that this role requires demonstrated AI tool usage and specifically calls out Claude and Cursor. Most candidates will list those as tools they've tried. I built a production project with them.

My NSE Paper-Trading Bot uses Claude's API as a reasoning layer for news and catalyst analysis, built entirely in Cursor. It's not a toy -- it runs rule-based technical scoring on live market data with an interactive web dashboard. I also hold four Anthropic certifications (Claude 101, Claude Code 101, Cowork, and Building with Claude API). I mention this first because it's the easiest way to show I don't just "use" AI tools. I build with them and I've invested in understanding how they work.

Now the marketing analytics part. At Pixis, I managed \$1.4M in media budgets for global D2C clients -- including one of India's biggest beauty brands. I owned the attribution dashboards tracking iROAS and incrementality, and I used that data to restructure their entire funnel. 3x ROAS in one month. Not from spending more, but from finally measuring what was actually working and cutting what wasn't.

At Plug Power, I built the multi-touch attribution model from scratch -- Salesforce, Adobe Analytics, GA, GTM stitched together into something that could actually track a click to a conversion. That framework cut CPA 25%. At GenY, I built the SQL dashboards that tracked CAC, ROAS, and conversion efficiency weekly. In both cases, the value wasn't the dashboard itself -- it was that someone finally turned messy campaign data into a decision.

GlossGenius is a beauty/wellness vertical SaaS company, and I've spent real time in that world. The Pixis beauty brand work taught me that beauty customers behave differently in funnels than SaaS or industrial buyers -- they're impulse-driven, visually responsive, and brutally honest about what doesn't work. That vertical instinct is hard to hire for.

I'd love to bring that combination -- AI-native, attribution-obsessed, beauty-vertical experienced -- to your Go-to-Market analytics team.
