Hiring Team, Hewlett Packard Enterprise

The hardest part of marketing AI infrastructure is not the infrastructure. It is convincing a CIO that AI value can show up inside their existing data and security perimeter, without an egress bill that eats the ROI. That is a positioning problem before it is a tech problem. The way HPE has framed Private Cloud AI, AI workloads where your data already lives, is a positioning answer, not a feature list. That is the part of PMM I want to do.

I have done the positioning side of the work in two places. At Sensata I rewrote messaging for industrial sensors so engineers heard outcomes (uptime, calibration cost, integration time) instead of spec sheets. 30+ OEM and distributor interviews fed the rewrite. The result was a \$2M+ first-year launch across NA and EU and +30% sales-rep win rate after I shipped distributor-branded battlecards and FAQs to 50+ reps. The lesson I took out: engineers buy on outcomes, not specs. The deck has three specs slides max; everything else is outcome and proof. That is the same muscle this role needs for enterprise IT and AI buyers.

I have also shipped an AI product end-to-end. SwipeHire is an AI job-matching platform I built solo on Python, OpenAI API, and React. ICP definition, competitive teardown, visa-aware positioning, GA4 and event tracking from day one, eight A/B tests on activation flows, weekly retention cohort analysis. 50+ users, +25% activation. I know what AI marketing looks like when the AI is the actual product, not a feature bullet, and I know which buyer questions are real (cost, latency, data residency) versus which are theater.

On the AI marketing platform side, at Pixis I trained eight enterprise marketers on AI bidding and creative tools. The job was to translate AI capabilities into outcomes the client could explain to their CFO. That translation is the same craft Private Cloud AI needs for enterprise IT.

What I do not have yet is deep HPE GreenLake or hybrid-cloud-landscape fluency. The vocabulary is week-one ramp. The PMM craft, GTM plans, positioning, sales enablement, AI to outcome translation, is what I already do.

Boston-based, comfortable Remote/Teleworker. Happy to walk through any of the above in more detail.
