Hiring Team, HelloFresh

Paid search at D2C consumer scale breaks at one specific seam: the gap between the aggregate ROAS the dashboard shows and the per-product-group margin the CFO actually cares about. Most teams have respectable blended numbers, a Shopping feed that runs, and a creative refresh that ships on cadence, and none of those reconcile against the question "which SKU is buying the headline ROAS at unit-economic loss." The marketers who scale paid search profitably are the ones whose Merchant Center feed is structured so the weak SKUs surface in their own product group, whose negative-keyword discipline catches branded-search cannibalization before it shows up in CAC, and whose AI Max budget pacing is tied to LTV cohort signals rather than 7-day ROAS.

I have run that work at GenY. 16x ROAS for a D2C consumer brand via a Google Merchant Center and Meta catalog rebuild: feed cleanup, schema fixes, product group architecture, structured Shopping plus Advantage+ campaigns, weekly creative refresh tested against fatigue cycles. The brand portfolio shape (consumer goods, multi-SKU, recurring purchase decision) is the closest analog in my CV to HelloFresh, EveryPlate, and Green Chef.

On rigor and platform depth, Plug Power was the proof. I owned Google Ads, SA360, Microsoft Ads, and Adobe-driven programmatic across Text Search, Shopping, and PMAx-equivalent campaigns with -25% CPA and +20% conversion. Closed-loop attribution from ad click to SQL ran through HubSpot, Salesforce, Adobe Analytics, GA4, and GTM. UTM spec written from zero, GTM containers rebuilt, lead routing validated through Salesforce campaign attribution before any cohort number got presented.

On multi-brand parallel execution, Pixis is the analog. Eight-client portfolio with per-client monthly media budgets ranging \$15K to \$90K, eight-person team across creative, account management, and platform. Trained eight enterprise marketers on AI bidding tools and Google Ads automation scripts. Validated 3x ROAS lift via holdout incrementality. Three brands at HelloFresh is fewer accounts than I have managed in parallel; the operating cadence is built.

On AI Max and automation, four Anthropic Claude certifications come from running prompt-based iteration as my actual workflow. SwipeHire shipped solo on Python, OpenAI API, and React. A Claude draft-and-critique pipeline I productized delivers 8x velocity on ad-copy variants, scaling personalized search ad copy across the granular keyword sets the role calls for.

NYC works. Open to relocating. Resume attached.
