Hiring Team, Idea Village

Running paid for a five-brand DTC house breaks at one specific seam: budget allocation across brands gets driven by last-week ROAS rather than per-brand contribution margin against the P&L the holdco actually cares about. The brand with the cleanest hero-SKU economics gets starved when a louder sister brand runs hot for a week. The fix is a holdco-level operating cadence where each brand has its own weekly QBR, its own Merchant Center taxonomy, its own LTV cohort signal feeding budget pacing, and a portfolio-level decision rhythm that catches when to reallocate and when to hold.

I have run that operating cadence at Pixis. Eight-client multi-brand portfolio with per-client monthly media budgets ranging \$15K to \$90K, eight-person team across creative, account management, and platform. Weekly client QBRs to client CFOs and growth leads. Trained eight enterprise marketers on AI bidding tools. Validated 3x ROAS lift on a fashion D2C client via holdout incrementality. Cut client churn 50% via per-client renewal-aligned playbooks. Five brands at Idea Village is fewer accounts than I have managed in parallel; the cadence is built.

On the DTC consumer side specifically, GenY is the proof. 16x ROAS for a D2C consumer brand via Google Merchant Center and Meta catalog rebuild: feed cleanup, schema fixes, product group architecture, structured Shopping plus Advantage+ campaigns, weekly creative refresh tested against fatigue cycles. The Shopping discipline that turns blended ROAS into per-SKU margin visibility is the same discipline a five-brand health-and-wellness portfolio needs.

On full-funnel rigor, Plug Power was the rebuild. Multi-channel paid stack on Google, Meta, LinkedIn, and Adobe-driven programmatic. CPA -25%, conversion +20%. Closed-loop attribution rebuilt across HubSpot, Salesforce, Adobe Analytics, GA4, and GTM. UTM spec written from scratch. Email and lifecycle ran in HubSpot alongside it: drip, MQL nurture, account-level behavioral segmentation, retargeting, suppression. Lifecycle architecture travels.

On AI tools for marketing efficiency, four Anthropic Claude certifications come from running prompt-based iteration as my actual workflow. SwipeHire shipped solo on Python, OpenAI API, and React. A Claude draft-and-critique pipeline I productized delivers 8x velocity on copy variants - useful when the keyword + creative volume across five brands hits real scale.

Miami works. Open to relocating. Resume attached.
