Hiring Team, Juicebox

The recruiter buyer is one of the hardest B2B audiences to write for. They have read every "AI is changing recruiting" piece. They have been pitched ten ZoomInfo alternatives this quarter. They smell sales fluff in the first paragraph. The content that wins them is not category-evangelism, it is operator-grade specificity: which Boolean string they can replace with which natural-language prompt, which workflow saves which hour per requisition, which Fortune 500 already bet on the new tool. That is the writing problem I want to solve at Juicebox.

I have written for technical-buyer audiences for four years. At Sensata I run the customer-story pipeline. Thirty-plus structured interviews with OEMs and distributors fed a positioning rewrite that lifted conversion 15%, and I shipped the sales enablement that came out of it (decks, case studies, battlecards, FAQs) to 50+ reps across three regions. Win rate up 30%. Engineers and procurement leaders are an audience that hates marketing speak. Recruiters share the trait.

On SEO, AEO, and GEO, I have run the program your JD describes. At Plug Power I owned on-page and technical SEO, schema rebuilds, content-cluster mapping, and FAQ cluster pages structured for AI-engine citation across ChatGPT, Claude, and Perplexity. The work showed up in net-new SQL volume from organic and a measurable lift in share-of-voice on AI engines. Profound is a tool I have not used directly. The audit method (which queries surface us, where the citations route, what the content gap is, what the 60-day roadmap looks like to close it) is the work I have already built. I keep one such audit (KKR, two pages, real) as a portfolio sample.

The Juicebox-specific differentiator is that I am the rare content marketer who has shipped an AI product end-to-end. SwipeHire is an AI job-matching platform I built solo on Python, OpenAI API, and React. ICP, instrumentation, eight A/B tests, weekly retention cohort. 50+ users, +25% activation. Plus four Anthropic Claude certifications from running prompt-based iteration as my actual writing and analysis workflow. Recruiting-adjacent vertical, AI-stack alignment, content craft. The combination is unusual.

I lived in r/cscareerquestions and r/h1b for a year running SwipeHire's organic community. The voice that lands with the candidate-side is something I learned by accident. Useful at Juicebox because the recruiter-side and the candidate-side share narratives more than the deck makes it look.

SF works. Open to relocating. Resume and a sample-work doc attached.
