Hiring Team, KKR

I've never seen a JD that lists Claude, ChatGPT, Gemini, and Perplexity as platforms to optimize for. Most search marketing roles are still stuck in a "Google Ads + SEO" world. This one isn't. That's why I'm writing.

Here's my unusual angle: I don't just understand how AI-powered search platforms work from a marketer's perspective. I've built with them. I hold four Anthropic Claude certifications (101, Code 101, Cowork, Building with Claude API) and I built a financial analytics tool using Claude's API as a reasoning layer -- Python backend, live market data, interactive dashboard. When your JD talks about Generative Engine Optimization and making KKR visible inside AI-powered discovery environments, I'm not learning a new concept. I'm applying something I've already built on top of.

The traditional search marketing foundation is solid too. At Plug Power, I owned the full SEM/PPC program -- Google Ads, SA360, keyword research, bid strategy, budget management. I also led SEO: on-page optimization, content gap analysis, technical improvements. That combination delivered -25% CPA and +20% conversion. I didn't inherit a running program. I built the strategy, set up the tracking (Salesforce + Adobe Analytics + GA + GTM), and ran the A/B tests on landing pages and user journeys that moved the numbers.

At Pixis, I scaled that to \$1.4M in acquisition budgets across global e-commerce brands -- search, Shopping, programmatic. I led CRO initiatives, managed an 8-person team, and cut client churn 50% by proving ROI through data, not promises. At GenY, I delivered 16x ROAS by rebuilding a D2C brand's entire search and Shopping presence from catalog feeds to campaign structure.

Two things about this role that feel personal: I'm Boston-based, so there's no relocation story. And the financial services preferred qual isn't a stretch -- my NSE Paper-Trading Bot is a financial analytics product that scores stocks using quantitative signals and an AI reasoning layer. I've already been thinking about how AI changes discovery in financial contexts.

KKR is building something forward-looking with this role -- optimizing for a world where search isn't just Google anymore. I want to be the person who figures out how to make that work.
