Hiring Team, Monstro

Selling AI infrastructure into a banking C-suite breaks at one specific seam. The CIO has been pitched ten governance-and-compliance AI tools this quarter, has internal counsel asking which model the LLM is built on, and reads any "AI" claim through the filter of "what happens when the regulator asks." The marketers who land that buyer write the prospect-profiling research that already addresses the second-question objection, build HubSpot sequences that map to the actual procurement cycle of a bank, and run paid that targets the IP block of a specific wealth-management firm rather than a job title.

I have built that infrastructure once. At Plug Power I architected the MarTech function from scratch on HubSpot, Salesforce, Adobe, GA4, and GTM. The UTM spec was written from zero. GTM containers got rebuilt. Sequences, pipelines, lifecycle stages, and account-level behavioral segmentation were architected in HubSpot, not inherited. CPA dropped 25%, conversion went up 20%. Closed-loop attribution traveled from ad click to SQL through Salesforce campaign attribution. The "built, not just used" line in the JD is the literal description of that work.

On the C-suite-translation muscle, Pixis is the closest analog. Eight-client B2B SaaS portfolio with per-client monthly media budgets ranging \$15K to \$90K, weekly client CFO QBRs presenting ROI and iROAS to growth leads and finance heads. I trained eight enterprise marketers on AI bidding tools as part of those QBRs. The translation work, AI methodology to procurement-ready outcome, is exactly the work Monstro is selling. The audience is different. The motion is the same.

On AI-tool fluency, four Anthropic Claude certifications come from running prompt-based iteration as my actual workflow. SwipeHire shipped solo on Python, OpenAI API, and React. A Claude draft-and-critique pipeline I productized delivers 8x velocity on ad-copy variants. AI for marketing is not a 2026 bolt-on; it is the operating system one product was built on.

On the bonus criteria, the AEO/GEO program I owned at Plug Power shipped FAQ pages structured for ChatGPT, Claude, and Perplexity citation. A 2-page enterprise AI-Search audit teardown I authored for KKR is available as a portfolio sample.

NYC works. Open to relocating. Resume attached.
